

Introduction To Environmental N Hanley

Paul E. Hardisty

Introduction to Environmental Economics Nick Hanley, Jason Shogren, Ben White, 2019-04 Clearly written, global in approach, and theoretically broad-minded, this text is an ideal introduction to environmental economics. Assuming no prior knowledge of economics, the international author team introduces fundamental economic concepts as they relate to our environment. They then use the fundamental concepts to explore and assess current and potential policy responses to some of the major environmental issues of our time. Examples are drawn from all over the world and include such vital issues as climate change, natural resource use, waste management, water pollution, and loss of biodiversity.

Negotiating Environmental Change F. Berkhout, 2003-01-01 The ESRC/GEC programme has made a major contribution in terms of environmental social science research. The chapters in this book provide incisive, detailed and reflective critiques of the development of knowledge over the last ten years and provide powerful and important messages about the challenges presented by the complex relationship between environmental and social change. The book should be essential reading for all researchers and also for all policymakers who are grappling with questions about how to respond to environment/society controversies. Judith Petts, Birmingham University, UK and Member of the Royal Commission on Environmental Pollution Global environmental change will be with us forever. But how it happens in the future, and with what effect on the planet and its peoples depends to a large extent on how the international agreements, national politics and local actions play out. This collection provides the most comprehensive assessment yet of these critical interconnections, and reveals how social scientists are making an invaluable contribution to the creation of more science and just livelihoods in a future world. Tim O'Riordan, University of East Anglia, UK An aphrodisiac to the tepid response of positivist social science. People are not merely actors, perpetrators and victims, in an environmental drama. The critical social theorists in this book constructively show us how people are improvising the stage and the script as we update our understanding of nature, what constitutes a good life, and our individual and collective options. Richard B. Norgaard, University of California, Berkeley, US Negotiating Environmental Change is a child of the ESRC's Global Environmental Change Programme, by far the biggest piece of work by social scientists in the United Kingdom during the 1990s. At the beginning of the twenty-first century the balance sheet needs to be drawn up: what do our policies, insights and values owe to the collaborative efforts of social scientists? This book suggests that ideas and approaches that were conceived at a time when the Ozone Hole, Global Warming and Biodiversity Losses were beginning to resonate in academic and policy circles have now entered the British and European psyche. The challenge of forward thinking in the twenty-first century, in which the environment is central to most of the issues that concern social science, is to demonstrate that the environment is not a separate territory. Environmental thinking and practice affects us in various guises: governance and democracy, business and management, risk and everyday consumption: the substance of this book. Negotiating Environmental Change makes clear the contribution that new thinking is making to problems that were not looked upon as environmental a decade ago, but which we now see as being at the forefront of global research and policy agendas. Michael Redclift, King's College London, UK Major advances have been made recently in environmental social science but the context and importance of this research has also changed. Social and natural science studies of the environment have begun to interact more closely with each other and many analysts now agree that an understanding of environmental problems often depends on an understanding of the attitudes and behaviour of people and organisations. Moreover, policy and public debates have also shown that many assumptions that underpin arguments about sustainable development need to be reconsidered and re-framed. This book by leading researchers presents a critical review of debates in environmental social science over the past decade. Three broad areas are covered in ten chapters: the problems of scientific uncertainty and its role in shaping environmental policy and decisions; the development of institutional frameworks for governing natural resources; and the link between economic and technological change and the environment. The book begins with an overview essay exam

Risk - A Multidisciplinary Introduction Claudia Klüppelberg, Daniel Straub, Isabell M. Welp, 2014-06-10 This is a unique book addressing the integration of risk methodology from various fields. It will stimulate intellectual debate and communication across disciplines, promote better risk management practices and contribute to the development of risk management methodologies. Individual chapters explain fundamental risk models and measurement, and address risk and security issues from diverse areas such as finance and insurance, the health sciences, life sciences, engineering and information science. Integrated Risk Sciences is an emerging discipline that considers risks in different fields, aiming at a common language, and at sharing and improving methods developed in different fields. Readers should have a Bachelor degree and have taken at least one basic university course in statistics and probability. The main goal of the book is to provide basic knowledge on risk and security in a common language; the authors have taken particular care to ensure that all content can readily be understood by doctoral students and researchers across disciplines. Each chapter provides simple case studies and examples, open research questions and discussion points, and a selected bibliography inviting readers to further study.

The Economics of Climate Change Anthony D Owen, 2004-05-06 This impressive new collection couldn't come at a better time. With global warming now becoming physically noticeable and the Kyoto treaty stalling in its efforts to get the developed world on board, a look at the economic factors of global warming is very much welcome. With contributions from distinguished authors and covering everything you need to know about global warming and its financial implications, this fascinating book will appeal across the political and scientific spectrum.

An Economist's Guide to Economic History Matthias Blum, Christopher L. Colvin, 2018-12-08 Without economic history, economics runs the risk of being too abstract or parochial, of failing to notice precedents, trends and cycles, of overlooking the long-run and thus misunderstanding 'how we got here'. Recent financial and economic crises illustrate spectacularly how the economics profession has not learnt from its past. This important and unique book addresses this problem by demonstrating the power of historical thinking in economic research. Concise chapters guide economics lecturers and their students through the field of economic history, demonstrating the use of historical thinking in economic research, and advising them on how they can actively engage with economic history in their teaching and learning. Blum and Colvin bring together important voices in the field to show readers how they can use their existing economics training to explore different facets of economic history. Each chapter introduces a question or topic, historical context or research method and explores how they can be used in economics scholarship and pedagogy. In a century characterised to date by economic uncertainty, bubbles and crashes, An Economist's Guide to Economic History is essential reading. Environmental Economics Nick Hanley, Jason F. Shogren, Benedict White, 1997 Environmental Economics in Theory and Practice provides a thorough and coherent review and discussion of environmental economics. It is a guide to the most important areas of natural resource and environmental economics, including the economics of non-renewable and renewable resource extraction, the economics of pollution control, the application of cost-benefit analysis to the environment, and the economics of sustainable development. The book concentrates on key elements of economic theory, and shows how they can be applied to real-world problems. Particular emphasis is placed on analyzing recent empirical studies from all over the world along with in-depth coverage of various

economic models. Each chapter develops the main theoretical results and recent analytic techniques necessary for understanding applications. Throughout the book, results are presented in words, graphs, and mathematical models; brief technical notes inform readers about optimal control theory, the Kuhn-Tucker conditions, game theory, and linear programming. Moving through the laws of thermodynamics to an analysis of market failure, the book turns to the economics of natural resources and pollution control. It concludes with an examination of environmental cost-benefit analysis and sustainable development. A comprehensive text, it is particularly suitable for use in advanced undergraduate and graduate courses in environmental and resource economics. Because of up-to-date coverage, it will also be of interest to professionals working in resource and environmental economics.

Redesigning Environmental Valuation Neil A. Powe, 2007-01-01 In an area where feelings often run high, the author has produced a judicious assessment of the challenges to placing a value on environmental goods without a clear market value. Thoughtfully written, *Redesigning Environmental Valuation* draws on research from multiple disciplines, in creating a rigorous, nuanced approach to ensuring that important consequences are not neglected. In so doing, it shows the way toward integrative social sciences. Baruch Fischhoff, Carnegie Mellon University, US This excellent book will reinvigorate interest in environmental valuation by economists and other social scientists. Its focus is clear it highlights the challenges that face valuation researchers and describes new and better ways of estimating values for the environment by drawing on methods that have evolved in other disciplines. A must read for all researchers interested in environmental valuation. Douglas C. MacMillan, University of Kent, UK This comprehensive volume explores the extent to which the challenges facing stated preference environmental valuation can be overcome through mixing methods. In redesigning stated preference, two approaches are considered: mixing methods within conventional stated preference; and then moving away from the conventional to explore the use of group methods within preference construction and forming a social consensus on willingness to pay. These approaches are assessed in the light of qualitative findings evaluating the applicability of environmental valuation. Providing a step-by-step guide to mixing methods within stated preference surveys, this book will appeal to environmental valuation practitioners and students undertaking post-graduate research into environmental valuation. It will also be of interest to students and practitioners involved in environmental science or related environmental fields.

Contingent Valuation of Yangtze Finless Porpoises in Poyang Lake, China Yanyan Dong, 2012-08-11 This book presents the findings of the study, and offers analysis of both its methodological and policy-related implications. On the methodology side, it assesses and validates the valuation workshop approach; appraises the effect of distance on willingness to pay and the influence of the respondents' ability to pay. From a policy perspective, the book examines the attitudes and preference of respondents on trade-offs between economic growth and ecological use.

Environmental Law and the Ecosystem Approach Froukje Maria Platjouw, 2016-05-05 The ecosystem approach embodies a concept of the environment which emphasizes the integrated components of nature as complex adaptive systems. This book examines the relationship between the architecture and design of environmental law and the implementation of the ecosystem approach as a means to maintain ecological integrity. The main issue addressed is: in which manner and to what extent does fragmentation and administrative discretion in environmental law impede the implementation of an ecosystem approach? This is explored through analysis of several questions: what is an ecosystem approach and how could it be implemented; how can economic evaluation of ecosystem services contribute to the debate; to what extent is environmental law fragmented and how does this affect the implementation of the ecosystem approach; to what extent does environmental law contain administrative discretion and how does this affect the implementation of the ecosystem approach; is there a need for greater consistency, coherence and a stronger rule of law in environmental law in light of the ecosystem approach? The main focus is on Europe, with additional international comparisons where appropriate. The book concludes by providing a normative portrayal of future environmental law as protective, systemic and predictable.

The Economics of Tourism Mike J. Stabler, Andreas Papatheodorou, M. Thea Sinclair, 2009-12-16 This new edition of *The Economics of Tourism* reflects the tremendous changes that have occurred in the tourism sector in the last twelve years. It recognizes that the nature of tourism demand and supply is being transformed by innovations in information communication technologies, market liberalization and climate change. Paralleling this, there is much greater interest in the study of tourism by both students and researchers in mainstream economics. The text is now in four parts covering: demand; supply; national, regional and international matters and environmental issues. The concluding chapter appraises the state of the economic research into tourism. The increased interest in tourism has engendered the development of new methods of analysis and the refinement of established ones. Accordingly, the book has been extensively restructured, revised and expanded with two new chapters: chapter six of the first edition is now broken down into two and a new chapter has been added on environmental issues to take account of new developments, critically review the associated literature and consider future trends in tourism economics research. The reader-friendliness of the book has also been enhanced in various ways, such as the extensive chapter cross-referencing to refresh the reader's memory and the inclusion of a detailed list of abbreviations. *The Economics of Tourism* will continue to make accessible for the non-specialist, the application and relevance of economics to tourism. Extensively revised and updated, including research and case studies the textbook will be an indispensable resource for both students and researchers.

Wilderness Protection in Europe C. J. Bastmeijer, Kees Bastmeijer, 2016-04 Assesses to what extent wilderness areas in Europe receive protection under international conventions, EU directives and domestic law.

Water Policy, Tourism, and Recreation Lin Crase, Suzanne O'Keefe, 2012-12-06 This book explores the complicated interrelationships between freshwater resources and tourism and recreation. The focus is on Australia, but comparisons with the experience of other countries are also made throughout. Yet Australia has been at the forefront of conflicts over drought and water use, particularly for irrigated agriculture, as well as of the design of policies and institutions for water policy, so there are many lessons which can be applied to other parts of the world. The authors examine in detail the relationships between water economics and supply, and the needs for tourism and recreation. The book discusses water use and access and the conflict between urban and recreational demands. It considers the institutional arrangements around water and the significance of property rights, including water markets and water pricing. Theoretical and practical models for

increasing collaboration and cooperation such as the use of trusts are also developed and water trusts in the USA are examined. Specific chapters highlight the role of interest groups, such as the boating industry, to influence policy thinking and the practical trade-offs between access to urban water supplies and the requirements of recreation. Tourist behavior in relation to water use and pricing is also assessed.

Energy and Environment Richard Loulou, Jean-Philippe Waaub, Georges Zaccour, 2005-12-05 This new work on energy and environmental modeling describes a broad variety of modeling methodologies, embodied in models of varying scopes and philosophies. Examples range from top-down integrated assessment models to bottom-up partial equilibrium models, to hybrid models.

While sustainability has been widely taken up by governments and business, the world has continued to move in increasingly unsustainable directions, from continued dependence on fossil energy to rising greenhouse gas emissions, and erosion

Economics of International Environmental Agreements M. Özgür Kayalica, Selim Çağatay, Hakan Mıhçı, 2017-02-17 International environmental agreements provide a basis for countries to address ecological problems on a global scale. However, countries are heterogeneous with respect to their economic structures and to the problems relating to the environment that they encounter. Therefore, economic externalities and global environmental conflicts are common and can cause problems in implementation and compliance with international agreements. Economics of International Environmental Agreements illuminates those issues and factors that might cause some countries or firms to take different positions on common problems. This book explores why international environmental agreements deal with some problems successfully but fail with others. The chapters address issues that are global in nature, such as: transboundary pollution, provision of global public goods, individual preferences of inequality- aversion, global cooperation, self-enforcing international environmental agreements, emission standards, abatement costs, environmental quota, technology agreement and adoption and international institutions. They examine the necessary conditions for the improved performance of international environmental agreements, how cooperation among countries can be improved and the incentives that can be created for voluntary compliance with international environmental agreements. This text is of great importance to academics, students and policy makers who are interested in environmental economics, policy and politics, as well as environmental law.
