An Introduction to Central Simple Algebras and Their Applications to Wireless Communication Grégory Berhuy, Frédérique Oggier, 2013-07-05 Central simple algebras arise naturally in many areas of mathematics. They are closely connected with ring theory, but are also important in representation theory, algebraic geometry and number theory. Recently, surprising applications of the theory of central simple algebras have arisen in the context of coding for wireless communication. The exposition in the book takes advantage of this serendipity, presenting an introduction to the theory of central simple algebras intertwined with its applications to coding theory. Many results or constructions from the standard theory are presented in classical form, but with a focus on explicit techniques and examples, often from coding theory. Topics covered include quaternion algebras, splitting fields, the Skolem-Noether Theorem, the Brauer group, crossed products, cyclic algebras and algebras with a unitary involution. Code constructions give the opportunity for many examples and explicit computations. This book provides an introduction to the theory of central algebras accessible to graduate students, while also presenting topics in coding theory for wireless communication for a mathematical audience. It is also suitable for coding theorists interested in learning how division algebras may be useful for coding in wireless communication.

Women in Politics and Media Maria Raicheva-Stover, Elza Ibroscheva, 2014-09-25 Although women constitute half of the world's population, their participation in the political sphere remains problematic. While existing research on women politicians from the United States, the United Kingdom and Canada sheds light on the challenges and opportunities they face, we still have a very limited understanding of women's political participation in emerging democracies. *Women in Politics and Media: Perspectives From Nations in Transition* is the first collection to de-Westernize the scholarship on women, politics and media by: 1) highlighting the latest research on countries and regions that have not been 'the usual suspects'; 2) featuring a diverse group of scholars, many of non-Western origin; 3) giving voice through personal interviews to politically active women, thus providing the reader with a rare insight into women's agency in the political structures of emerging democracies. Each chapter examines the complex women, politics and media dynamic in a particular nation-state, taking into consideration the specific political, historic and social context. With 23 case studies and interviews from Latin America, sub-Saharan Africa, the Middle East and North Africa, Central and Eastern Europe, Asia, Russia and the former Soviet republics, this volume will be of interest to students, media scholars and policy makers from developed and emerging democracies.

Filled with practical, relevant worked examples and exercise problems, the book presents complete coverage of the topics that optical and communications engineering students need to be successful. From principles of optical and optoelectronic components, to optical transmission system design, and from conventional optical fiber links, to more useful optical communication systems with advanced modulation formats and high-speed DSP, this book covers the necessities on the topic, even including today's important application areas of passive optical networks, datacenters and optical interconnections. Covers fiber-optic communication system fundamentals, design rules and terminologies Provides students with an understanding of the physical principles and characteristics of passive

and active fiber-optic components Teaches students how to perform fiber-optic system design, performance evaluation and troubleshooting Includes modern advances in modulation and decoding strategies

Social Media and Elections in Africa, Volume 2 Martin N. Ndlela, Winston Mano, 2020-02-14 This book, the second of two volumes, explores the challenges and opportunities presented by the increased presence of social media within African politics. Electoral processes in Africa have assumed new dimensions due to the influence of social media. As social media permeates different aspects of elections, it is ostensibly creating new challenges and opportunities. Most evident are the challenges of hate speech, misogyny and incivility. This book considers the impact of digital media before, during, and after elections, as well as authorities' attempts to legislate and regulate the internet in response. Contributions to this volume analyse social media posts, transgressive images, newspaper articles, and include case studies of Algeria, Zimbabwe, Kenya, South Africa, Nigeria and Uganda. This results in the delivery of an original depiction of the use of social media in a variety of African contexts. This book will appeal to academics and students of media and communication studies, political studies, journalism, sociology, and African studies.

Discourse Perspectives on Organizational Communication Jolanta Artiz, Robyn C. Walker, 2011-10-16 Discourse Perspectives in Organizational Communication brings together researchers from the social sciences and humanities to look at discourse and how it shapes organizations and their social actors. Unlike others in the field, this book assumes that language creates and constitutes reality, rather than simply mirroring or describing it. This collection illustrates the variety of organizational phenomena that might be studied and the range of epistemological and methodological approaches that might be used in discourse analysis techniques.

What Movies Teach about Race Roslyn M. Satchel, 2016-11-29 What Movies Teach About Race: Exceptionalism, Erasure, & Entitlement reveals the way that media frames in entertainment content persuade audiences to see themselves and others through a prescriptive lens that favors whiteness. These media representations threaten democracy as conglomeration and convergence concentrate the media's global influence in the hands of a few corporations. By linking film's political economy with the movie content in the most influential films, this critical discourse study uncovers the socially-shared cognitive structures that the movie industry passes down from one generation to another. Roslyn M. Satchel encourages media literacy and proposes an entertainment media cascading network activation theory that uncovers racialized rhetoric in media content that cyclically begins in historic ideologies, influences elite discourse, embeds in media systems, produces media frames and representations, shapes public opinion, and then is recycled and perpetuated generationally.
