The Pariahs of Yesterday Leslie Page Moch, 2012-03-30 This work looks at the surge of Bretons who left their homes in Western France in the latter half of the 19th century to live and work in Paris. Portrayed as backward, ignorant peasants they found no welcome until after WWII. Moch positions her work within immigration theory, connecting migration studies to theories about state projects of assimilation and about cultures of inclusion and exclusion.

First Language Use in Second and Foreign Language Learning Miles Turnbull, Jennifer Dailey-O'Cain, 2009-08-24 This volume offers fresh perspectives on a controversial issue in applied linguistics and language teaching by focusing on the use of the first language in communicative or immersion-type classrooms. It includes new work by both new and established scholars in educational scholarship, second language acquisition, and sociolinguistics, as well as in a variety of languages, countries, and educational contexts. Through its focus at the intersection of theory, practice, curriculum and policy, the book demands a reconceptualization of code-switching as something that both proficient and aspiring bilinguals do naturally, and as a practice that is inherently linked with bilingual code-switching.

Mathematical Problem Solving ALAN H. SCHOENFELD, 2014-06-28 This book is addressed to people with research interests in the nature of mathematical thinking at any level, to people with an interest in higher-order thinking skills in any domain, and to all mathematics teachers. The focal point of the book is a framework for the analysis of complex problem-solving behavior. That framework is presented in Part One, which consists of Chapters 1 through 5. It describes four qualitatively different aspects of complex intellectual activity: cognitive resources, the body of facts and procedures at one's disposal; heuristics, rules of thumb for making progress in difficult situations; control, having to do with the efficiency with which individuals utilize the knowledge at their disposal; and belief systems, one's perspectives regarding the nature of a discipline and how one goes about working in it. Part Two of the book, consisting of Chapters 6 through 10, presents a series of empirical studies that flesh out the analytical framework. These studies document the ways that competent problem solvers make the most of the knowledge at their disposal. They include observations of students, indicating some typical roadblocks to success. Data taken from students before and after a series of intensive problem-solving courses document the kinds of learning that can result from carefully designed instruction. Finally, observations made in typical high school classrooms serve to indicate some of the sources of students' (often counterproductive) mathematical behavior.

The Minimal Cell Pier Luigi Luisi,Pasquale Stano,2010-11-01 In the last ten years there has been a considerable increase of interest on the notion of the minimal cell. With this term we usually mean a cell-like structure containing the minimal and sufficient number of components to be defined as alive, or at least capable of displaying some of the fundamental functions of a living cell. In fact, when we look at extant living cells we realize that thousands of molecules are organized spatially and functionally in order to realize what we call cellular life. This fact elicits the question whether such huge complexity is a necessary condition for life, or a simpler molecular system can also be defined as alive. Obviously, the concept of minimal cell encompasses entire families of cells, from totally synthetic cells, to semi-synthetic ones, to primitive cell models, to simple biomimetic cellular systems. Typically, in the experimental approach to the construction of minimal the main ingredient is the compartment. Lipid vesicles (liposomes) are used to host simple and complex molecular transformations, from single or multiple enzymic reactions, to polymerase chain reactions, to gene expression. Today this research is seen as part of the broader scenario of synthetic biology but it is rooted in origins of life studies, because the construction of a minimal cell might provide biophysical insights into the origins of primitive cells, and the emergence of life on earth. The volume provides an overview of physical, biochemical and functional studies on minimal cells, with emphasis to experimental approaches. 15 International experts report on their innovative contributions to the construction of minimal cells.

Mathematical Knowledge: Its Growth Through Teaching Alan Bishop,Stieg Mellin-Olsen,Joop van Dormolen,2013-11-27 In the first BACOMET volume different perspectives on issues concerning teacher education in mathematics were presented (B. Christiansen, A. G. Howson and M. Otte, Perspectives on Mathematics Education, Reidel, Dordrecht, 1986). Underlying all of them was the fundamental problem area of the relationships between mathematical knowledge and the teaching and learning processes. The subsequent project BACOMET 2, whose outcomes are presented in this book, continued this work, especially by focusing on the genesis of mathematical knowledge in the classroom. The book developed over the period 1985-9 through several meetings, much discussion and considerable writing and redrafting. Our major concern was to try to analyse what we considered to be the most significant aspects of the relationships in order to enable mathematics educators to be better able to handle the kinds of complex issues facing all mathematics educators as we approach the end of the twentieth century. With access to mathematics education widening all the time, with a multitude of new materials and resources being available each year, with complex cultural and social interactions creating a fluctuating context of education, with all manner of technology becoming more and more significant, and with both informal education (through media of different kinds) and non formal education (courses of training etc.) growing apace, the nature of formal mathematical education is increasingly needing analysis.

Encyclopedia of Modern French Thought Christopher John Murray,2004 This work covers not only philosophy, but also all the other major disciplines, including literary theory, sociology, linguistics, political thought, theology, and more. The 240 analytical entries examine individuals such as Bergson, Durkheim, Mauss, Sartre, Beauvoir, Foucault, Levi-Strauss, Lacan, Kristeva, and Derrida; specific disciplines such as the arts, anthropology, historiography, psychology, and sociology; key beliefs and methodologies such as Catholicism, deconstruction, feminism, Marxism, and phenomenology; themes and concepts such as freedom, language, media, and sexuality; and historical, political, social, and intellectual context. --From publisher's description.

Biomimetic Polymers C.G. Gebelein,2012-12-06 The term biomimetic is comparatively new on the chemical scene, but the concept has been utilized by chemists for many years. Furthermore, the basic idea of making a synthetic material that can imitate the functions of natural materials probably could be traced back into antiquity. From the dawn of creation, people have probably attempted to duplicate or modify the activities of the natural world. (One can even find allusions to these attempts in the Bible; e. g. , Genesis 30.) The term mimetic means to imitate or mimic. The word mimic means to copy closely, or to imitate accurately. Biomimetic, which has

not yet entered most dictionaries, means to imitate or mimic some specific biological function. Usually, the objective of biomimetics is to form some useful material without the need of utilizing living systems. In a similar manner, the term biomimetic polymers means creating synthetic polymers which imitate the activity of natural bioactive polymers. This is a major advance in polymer chemistry because the natural bioactive polymers are the basis of life itself. Thus, biomimetic polymers imitate the life process in many ways. This present volume delineates some of the recent progress being made in this vast field of biomimetic polymers. Chemists have been making biomimetic polymers for more than fifty years, although this term wasn't used in the early investigations.

Architecture for Psychiatric Environments and Therapeutic Spaces E. Chrysikou, 2014-12-18 Therapeutic architecture can be described as the people-centered, evidence-based discipline of the built environment, which aims to identify and support ways of incorporating those spatial elements that interact with people physiologically and psychologically into design. Architecture is an important factor in people's lives when they are well; when they experience ill-health and are less able to cope it becomes even more important. This book explores the design of specialized residential architecture for people with mental health problems. It sets out to show how building design can support medical and health related procedures and practices, leading to better therapeutic outcomes and an enhanced quality of life. Based on almost two decades of research, it aims to understand how architectural design interacts with the therapeutic milieu, the care programs, and actually living in the spaces. The book is divided into two main parts covering theory and research. Part one consists of three chapters: a brief introduction to old practices, current medical psychosocial and architectural thinking, and alternative thinking. Part two explores the research and conclusions derived from fieldwork. This book provides a fascinating insight into the effect that architectural design can have on all of us, but particularly on those with mental health problems. Dr. Evangelia Chrysikou explains the many aspects of mental health and its relation to the quality of the built environment and I strongly recommend this very enjoyable book to anyone who would like to find out more about this important topic. - Prof. Alan Dilani, Ph.D. , International Academy for Design and Health This book provides important, evidence-based data that will help to drive the design of new and refurbished psychiatric facilities and will no doubt become a highly-regarded resource for medical planners and architects. - Jo Makosinski , Editor, Building Better Healthcare

Sound to Sense, Sense to Sound Pietro Polotti, 2008 Since the 1950s, Sound and Music Computing (SMC) research has had a profound impact on the development of culture and technology in our post-industrial society. SMC research approaches the whole sound and music communication chain from a multidisciplinary point of view. By combining scientific, technological and artistic methodologies it aims at understanding, modeling, representing and producing sound and music using computational approaches. This book, by describing the state of the art in SMC research, gives hints of future developments, whose general purpose will be to bridge the semantic gap, the hiatus that currently separates sound from sense and sense from sound.

My Only Son Christopher J. Gambino, 2004-07 My only Son, is the story of Vinny Denucci, the son of Sonny Denucci, the head of a New York organized crime family and the Boss of Bosses of the (5) Mafia families of New York. The story begins when Vinny is fourteen (14), a naive, intelligent good-natured boy, who does not fully understand what his father does for a living. Vinny has dreams of becoming a lawyer when he reaches adulthood. Sonny is a ruthless crime lord, who wants his only son to be his successor as head of the crime family. Felicia, Vinny's mother, is a strong-willed individual who has grown tired of living the life of a crime boss wife, and wants her son, with whom she is extremely close, to follow his dreams to a life outside the family. Sonny is so outraged and threatened by Felicia's interference with his plans for Vinny that he takes Felicia's life, and with the help of a crooked New York Detective, is able to cover up his horrible crime. With Felicia out of the way, Sonny drags Vinny into the life he and Felicia so vehemently wanted him to avoid. This story, through its many twists and turns, traces the life of Vinny as he is initiated into the family, becomes a mobster, and eventually winds up in prison. While Vinny is in prison his grandmother Gina, Felicia's mother, is approached by an FBI Agent Rick Carr, who tells her that Felicia's death was not natural, as had been reported, and that he suspects Sonny was involved with her death. Once Gina relates this information to Vinny upon his release from prison, he makes the life-altering decision to work with the FBI to try to bring down his Father's empire, in order to avenge his beloved mother's death. The story culminates in a heart-stopping confrontation between Vinny and Sonny that will have the viewers on the edge of their seats.
