Tinkering Curt Gabrielson,2015-10-28 How can you consistently pull off hands-on tinkering with kids? How do you deal with questions that you can't answer? How do you know if tinkering kids are learning anything or not? Is there a line between fooling around with real stuff and learning? The idea of learning through tinkering is not so radical. From the dawn of time, whenever humanity has wanted to know more, we have achieved it most effectively by getting our hands dirty and making careful observations of real stuff. Make: Tinkering (Kids Learn by Making Stuff) lets you discover how, why--and even what it is--to tinker and tinker well. Author Curt Gabrielson draws on more than 20 years of experience doing hands-on science to facilitate tinkering: learning science while fooling around with real things. This book shows you how to make: A drum set from plastic bottles, tape, and shrink-wrap Magnetic toys that dance, sway, and amaze Catapults, ball launchers, and table-top basketball A battery-powered magic wand and a steadiness game (don't touch the sides!) Chemical reactions with household items Models of bones and tendons that work like real arms and ankles Spin art machine and a hovercraft from a paper plate! Lifelong learners hungry for their next genuine experience

Death Match Lincoln Child,2006-10-31 A cautionary tale about artificial intelligence (Washington Post) that is almost too frighteningly believable not to be real—from the internationally acclaimed #1 New York Times bestselling thriller writer Lewis and Lindsay Thorpe were the perfect couple: young, attractive, and ideally matched. But the veil of perfection can mask many blemishes. When the Thorpes are found dead in their tasteful Flagstaff living room (having committed double suicide), alarms go off in the towering Manhattan offices of Eden Incorporated, the high-tech matchmaking company whose spectacular success, and legendary secrecy, has inspired awe around the world. The Thorpes, few people knew, were more than the quintessential happy couple—they were Eden's first perfect match. A short time later, Christopher Lash, a gifted former FBI forensic psychologist, receives an urgent plea from Eden to perform a quick—and quiet—investigation into the deaths. Lash's psychological autopsy reveals nothing suspicious, but inadvertently dredges up the memories of a searing personal tragedy he has kept at bay for years. The situation changes suddenly when a second Eden couple is found dead—by all appearances, another double suicide. Now Eden—particularly Richard Silver, the company's brilliant and reclusive founder—has no choice but to grant Lash unprecedented access to its most guarded secrets if he is to have any chance of determining what is going wrong. The hidden world he discovers is a stunning labyrinth of artificial intelligence, creative genius, and a melding of technology that does indeed, to Lash's surprise, deliver on Eden's promise to its clients: the guarantee of a perfect, lifelong mate. But Lash's involvement in the investigation becomes more personal and dangerous than he could have imagined, nearly as soon as it begins. Infused with relentless suspense and tremendous imagination and skill, *Death Match* is master thriller writer Lincoln Child at his best. Don't miss Lincoln Child's new thriller, *Chrysalis*!

Inventive Minds Marvin Minsky,2019-04-23 Six essays by artificial intelligence pioneer Marvin Minsky on how education can foster inventiveness, paired with commentary by Minsky's former colleagues and students. Marvin Minsky was a pioneering researcher in artificial intelligence whose work led to both theoretical and practical advances. His work was motivated not only by technological advancement but also by the desire to understand the workings of our own minds. Minsky's insights about the mind provide fresh perspectives on education and how children learn. This book collects for the first time six essays by Minsky on children, learning, and the potential of computers in school to enrich children's development. In these essays Minsky discusses the shortcomings of conventional education (particularly in mathematics) and considers alternative approaches; reflects on the role of mentors; describes higher-level strategies for thinking across domains; and suggests projects for children to pursue. Each essay is paired with commentary by one of Minsky's former colleagues or students, which identifies Minsky's key ideas and connects his writings to current research. Minsky once observed that in traditional teaching, "instead of promoting inventiveness, we focus on preventing mistakes." These essays offer Minsky's unique insights into how education can foster inventiveness. Commentary by Hal Abelson, Walter Bender, Alan Kay, Margaret Minsky, Brian Silverman, Gary Stager, Mike Travers, Patrick Henry Winston

He liked the pictures and said he learned new facts about Mars. He spoke of the differences between Mars and Earth and is excited that robots are exploring the planet and sending information back to Earth. This is a good series for young readers. - Danie M. Fun and educational book - kids love it! - Guess what? Humans are probably going to Mars in our children's' lifetimes. So this book is a great book to introduce kids to space. Cute art, good descriptions for kids to learn, and a nice glossary at the back too. My kids loved it. -

Ashley Clear, inviting, and fun to read! - What a lovely book! Although intended for toddlers, I learned quite a bit from it myself! I loved the simple but accurate explanations and the lovely illustrations! Everything is so clear and pleasant to the eyes. We need more books like this one! - Tsila G. Super Cool! - This book is amazing! My daughter is so into it and has learned so much! We got it for her at age 3 and its our frequent bed time story! She loves it! - Antonio

Race After Technology Ruha Benjamin,2019-07-09 From everyday apps to complex algorithms, Ruha Benjamin cuts through tech-industry hype to understand how emerging technologies can reinforce White supremacy and deepen social inequity. Benjamin argues that automation, far from being a sinister story of racist programmers scheming on the dark web, has the potential to hide, speed up, and deepen discrimination while appearing neutral and even benevolent when compared to the racism of a previous era. Presenting the concept of the “New Jim Code,” she shows how a range of discriminatory designs encode inequity by explicitly amplifying racial hierarchies; by ignoring but thereby replicating social divisions; or by aiming to fix racial bias but ultimately doing quite the opposite. Moreover, she makes a compelling case for race itself as a kind of technology, designed to stratify and sanctify social injustice in the architecture of everyday life. This illuminating guide provides conceptual tools for decoding tech promises with sociologically informed skepticism. In doing so, it challenges us to question not only the technologies we are sold but also the ones we ourselves manufacture. Visit the book's free Discussion Guide here.

How Children Learn the Meanings of Words Paul Bloom,2002-01-25 How do children learn that the word dog refers not to all four-legged animals, and not just to Ralph, but to all members of a particular species? How do they learn the meanings of verbs like think, adjectives like good, and words for abstract entities such as mortgage and story? The acquisition of word meaning is one of the fundamental issues in the study of mind. According to Paul Bloom, children learn words through sophisticated cognitive abilities that exist for other purposes. These include the ability to infer others' intentions, the ability to acquire concepts, an appreciation of syntactic structure, and certain general learning and memory abilities. Although other researchers have associated word learning with some of these capacities, Bloom is the first to show how a complete explanation requires all of them. The acquisition of even simple nouns requires rich conceptual, social, and linguistic capacities interacting in complex ways. This book requires no background in psychology or linguistics and is written in a clear, engaging style. Topics include the effects of language on spatial reasoning, the origin of essentialist beliefs, and the young child's understanding of representational art. The book should appeal to general readers interested in language and cognition as well as to researchers in the field.

It is an excellent way to introduce my kids to advanced science topics in an age-appropriate manner. The drawings are so cute. I am thrilled with this

purchase. - ACS Must read - These books make great gifts and great discoveries in the classroom. - Raman Bhasin Beautiful treatment of a complex topic - This book was a delightful surprise. As someone who teaches young kids about computer science, I expected this to be stilted and/or boring but it was lovely and engaging! It's a great intro to an important topic. - Stephanie Hosford New topic written in easy fun manner - Incredible way for parents to share with their child a relevant and upcoming topic of machine learning in a fun way. - John Ngui Simply easy for the child to grasp scientific concepts! A fun way to learn - I believe that the collection is a great way to introduce these topics to our children, these topics will help them better understand the world of science and technology that they are growing up in - Angela K. An Extremely Engaging Book for Curious Minds - My partner and I absolutely loved the artwork and found the content to be remarkably better when compared to books of a similar vein that are currently available. We think the book a perfect way to introduce early science readers to children as it is captivating and feeds the curiosity. We look forward to adding more of Dr. Dhoot's books to our already growing collection. - Sakshi Kind, gentle, and engaging early introduction to big topics - All three books provide an engaging exploration that gently introduces a child to big topics. - Yuri Must Buy! What a great addition to Kids' STEM collection - Amitoj Gill

Secret Coders: Secrets & Sequences Gene Luen Yang, 2017-03-07 The coders are back in the third volume of the exciting new computer-programming series by New York Times–bestselling author Gene Luen Yang.

Baby Loves Coding! Ruth Spiro, 2018-06-05 Big, brainy science for the littlest listeners. Accurate enough to satisfy an expert, yet simple enough for baby, this clever board book showcases the use of logic, sequence, and patterns to solve problems. Can Baby think like a coder to fix her train? Beautiful, visually stimulating illustrations complement age-appropriate language to encourage baby's sense of wonder. Parents and caregivers may learn a thing or two, as well! Author's Note: The goal of the Baby Loves Science books is to introduce STEM topics in a developmentally appropriate way. As a precursor to learning programming languages and syntax, Baby Loves Coding presents the concepts of sequencing, problem solving, cause and effect, and thinking step-by-step. Practicing these skills early creates a solid foundation for reading, writing, math and eventually, programming.
