CATIA V5 FEA Tutorials Release 20 Nader G. Zamani,2011 The objective of this tutorial book is to expose the reader to the basic FEA capabilities in CATIA V5 Release 20. The chapters are designed to be independent of each other allowing the user to pick specific topics without the need to go through the previous chapters. However, the best strategy to learn is to sequentially cover the chapters. In this workbook, the parts created in CATIA are simple enough they can be modeled with minimal knowledge of this powerful software. The reason behind the simplicity is not to burden the reader with the CAD aspects of the package. However, it is assumed that the user is familiar with CATIA V5 Release 20 interface and basic utilities such as pan, zoom, and rotation. The tutorials are based on release 20; however, other releases can also be used with minor changes. Typically, the differences are not even noticed by a beginner.

Adaptive, tolerant and efficient composite structures Martin Wiedemann, Michael Sinapius, 2014-09-20 Composite structures are most efficient in performance and production cost when combined with smart materials making them adaptable to changing operational conditions. The specific production processes of composites offer the possibility to integrate more functions thus making the structure more valuable. Active functions can be realized by smart materials, e.g. morphing, active vibration control, active structure acoustic control or structure health monitoring. The foundation is a sound understanding of materials, design methods, design principles, production technologies and adaptronics. Along the complete process chain this disciplines together deliver advanced lightweight solutions for applications ranging from mechanical engineering to vehicles, airframe and finally space structures. This book provides the scientific foundations as well as inspiring new ideas for engineers working in the field of composite

lightweight structures.
