Handwriting strengthens the coordinated movement of the hand and eye, develops the brain's neural pathways, spatial perception, arc movements, wrist and finger movements, fine motor movements of the hand, thus improving manual dexterity, visualization skills, and a sense of rhythm through a continuous alternation of braking and momentum. People who write by hand have better memory and think more. Combine fun with learning! Beautiful Symmetry Alex Berke,2020-02-18 A coloring book that invites readers to explore symmetry and the beauty of math visually. Beautiful Symmetry is a coloring book about math, inviting us to engage with mathematical concepts visually through coloring challenges and visual puzzles. We can explore symmetry and the beauty of mathematics playfully,

coloring through ideas usually reserved for advanced courses. The book is for children and adults, for math nerds and math avoiders, for educators, students, and coloring enthusiasts. Through illustration, language that is visual, and words that are jargon-free, the book introduces group theory as the mathematical foundation for discussions of symmetry, covering symmetry groups that include the cyclic groups, frieze groups, and wallpaper groups. The illustrations are drawn by algorithms, following the symmetry rules for each given group. The coloring challenges can be completed and fully realized only on the page; solutions are provided. Online, in a complementary digital edition, the illustrations come to life with animated interactions that show the symmetries that generated them. Traditional math curricula focus on arithmetic and the manipulation of numbers, and may make some learners feel that math is not for them. By offering a more visual and tactile approach, this book shows how math can be for everyone. Combining the playful and the pedagogical, Beautiful Symmetry offers both relaxing entertainment for recreational colorers and a resource for math-curious readers, students, and educators.

Color Your Math! Kristine L Venneman, 2021-05-05 Color Your Math offers a fun way for kids ages 3 to 6 develop their intuition about numbers while showing parents essential early number concepts. Using fun to color images of animals, cupcakes, cookies and clowns, this elementary math coach created book is as sophisticated as it is silly. It is designed to appeal to boys and girls and includes dogs, cats, cars, robots and ice cream cones. More than a workbook, this book has large images and subtly shows many ways of thinking about numbers. Parents can support their young children by reading the simple question on the left page and listening to the response. More than simple counting, this book shows how to use counters to represent numbers and challenges preschoolers, kindergarteners and first graders to consider, How many are missing? which is the number one struggle in early numeracy development. This book has a variety of different images to appeal to boys and girls. The math is subtle and I do hope it inspires parents to replicate some of these ideas while playing with their children. These are also a fabulous center activity in the preschool and kindergarten classroom and are still worthwhile for first graders. First grade teachers know the importance of early number sense and hiding games and part whole models give that a huge boost! How to use this book: Math suggestions are included on the left page

for each coloring page. We begin with cardinality and correspondence. Children can count the items and write the numeral in the speech bubble. Ask them to draw the same number of counters or colored circles in the 5 Frame as shown in the first image. You can begin by tracing mine. Research shows we do not spend enough time developing solid understanding of numbers nested within 5 (ALL the ways of making 5 and 4 and 3 and 2 and 1 and 0.) While the math is optional, there are ideas for telling math stories, estimating and playing Which One Doesn't Belong? While it is essential to continue counting higher and higher, we must count actual items more than simply saying the numbers. Children need a solid sense about 0-5 in order to build deeper understanding within 10. For more details be sure to read the final page and visit me at themathviking.com.
