Assessing Fitness for Military Enlistment
National Research Council, Division of Behavioral
and Social Sciences and Education, Board on
Behavioral, Cognitive, and Sensory
Sciences, Committee on the Youth Population and
Military Recruitment: Physical, Medical, and
Mental Health Standards, 2006-02-27 The U.S.
Department of Defense (DoD) faces short-term and
long-term challenges in selecting and recruiting
an enlisted force to meet personnel requirements
associated with diverse and changing missions. The
DoD has established standards for
aptitudes/abilities, medical conditions, and
physical fitness to be used in selecting recruits
who are most likely to succeed in their jobs and
complete the first term of service (generally 36
months). In 1999, the Committee on the Youth
Population and Military Recruitment was
established by the National Research Council (NRC)
in response to a request from the DoD. One focus
of the committee's work was to examine trends in
the youth population relative to the needs of the
military and the standards used to screen
applicants to meet these needs. When the committee
began its work in 1999, the Army, the Navy, and
the Air Force had recently experienced recruiting
shortfalls. By the early 2000s, all the Services
were meeting their goals; however, in the first
half of calendar year 2005, both the Army and the
Marine Corps experienced recruiting difficulties
and, in some months, shortfalls. When recruiting
goals are not being met, scientific guidance is
needed to inform policy decisions regarding the

advisability of lowering standards and the impact of any change on training time and cost, job performance, attrition, and the health of the force. *Assessing Fitness for Military Enlistment* examines the current physical, medical, and mental health standards for military enlistment in light of (1) trends in the physical condition of the youth population; (2) medical advances for treating certain conditions, as well as knowledge of the typical course of chronic conditions as young people reach adulthood; (3) the role of basic training in physical conditioning; (4) the physical demands and working conditions of various jobs in today's military services; and (5) the measures that are used by the Services to characterize an individual's physical condition. The focus is on the enlistment of 18- to 24-year-olds and their first term of service.

Exercise Testing and Prescription Lab Manual
Edmund O. Acevedo, Michael A. Starks, 2011-01-06

With a focus on foundational information, the Exercise Testing and Prescription Lab Manual, Second Edition, offers practical application of knowledge and skills associated with standardized health- and fitness-related tests. Progressing through 14 easy-to-follow experiential-based learning labs, readers will gain the skills and techniques required for successful completion of the ACSM Certified Health Fitness Specialist certification (CHFS). The improved second edition includes the latest updates consistent with the recent modifications published within the ACSM's Guidelines for Exercise Testing and Prescription, Eighth Edition. In this new edition, readers will also find the following features:

- In-depth content regarding functional parameters related to exercise, especially in regard to heart rate and blood pressure
- Additional information on body composition testing focusing on improved knowledge and skills related to assessment of skinfolds and circumferences
- New emphasis on the importance of assessment and how assessment relates to overall program development
- An updated format that flows progressively through testing and prescription
- Enhanced discussion questions within each lab, which incorporate more in-depth analysis of the information being covered

Though most closely matched with ACSM CHFS certification guidelines, Exercise Testing and Prescription Lab Manual, Second Edition, is also useful for individuals preparing for certification within other training organizations or as a resource for the ACSM Certified Personal Trainer certification. The progression of labs through the testing and

prescription process, easy-to-follow instructions, and forms and worksheets also make this lab manual an excellent experiential component for a course in exercise testing and prescription. Exercise Testing and Prescription Lab Manual, Second Edition, is organized into three sections covering pretest responsibilities, exercise testing techniques, and exercise prescription. Readers will learn safety procedures and requirements for exercise testing equipment, follow step-by-step instructions for calibration of laboratory instruments, and learn guidelines for medical history evaluation, risk factor evaluation and stratification, and informed consent. Next, the application of techniques used in assessing the components of health-related fitness is presented. Within the exercise prescription section, readers learn about the calculation of metabolic work, the three phases of exercise prescription, assessment of participants' goals, and gaining participants' commitment to the exercise prescription. A final comprehensive lab challenges readers to apply techniques and principles in developing various case studies. Each lab features the same easy-to-follow format outlining the purpose of the lab, materials required, background information, procedures, discussion questions, and references. Detailed appendixes contain a summary of the effects of common pharmacological agents on cardiorespiratory responses at rest, common metric conversions used in exercise testing and prescription calculations, a list of metabolic and anthropometric formulas, and answers to lab questions. The appendixes also contain all forms

and worksheets required for collecting data and completing the lab assignments. The second edition of the Exercise Testing and Prescription Lab Manual provides focused, step-by-step preparation for those studying for the ACSM CHFS certification. With its reorganized format, up-to-date information, and forms and worksheets, this text is also a valuable best-practices reference for health and fitness specialists certified by the ACSM and other organizations.

ACSM's Health/Fitness Facility Standards and Guidelines American College of Sports Medicine, 2012-02-14 ACSM's Health/Fitness Facility Standards and Guidelines, Fourth Edition, presents the current standards and guidelines that help health and fitness establishments provide high-quality service and program offerings in a safe environment. This text is based in large part on both the work that has begun through the NSF international initiative to develop industry standards to serve as the foundation for a voluntary health and fitness facility certification process and the third edition of ACSM's Health/Fitness Facility Standards and Guidelines. The ACSM's team of experts in academic, medical, and health and fitness fields have put together an authoritative guide for facility operators and owners. By detailing these standards and guidelines and providing supplemental materials, ACSM's Health/Fitness Facility Standards and Guidelines provides a blueprint for health and fitness facilities to use in elevating the standard of care they provide their members and users as well as enhance their

exercise experience. The fourth edition includes new standards and guidelines for pre-activity screening, orientation, education, and supervision; risk management and emergency procedures; professional staff and independent contractors; facility design and construction; facility equipment; operational practices; and signage. This edition includes these updates:

- Standards and guidelines aligned with the current version of the pending NSF international health and fitness facility standards
- New guidelines addressing individuals with special needs
- New standards and guidelines regarding automated external defibrillators (AEDs) for both staffed and unstaffed facilities
- Revised standards and guidelines to reflect changing directions and business models within the industry, including 24/7 fitness facilities, medically integrated facilities, and demographic-specific facilities
- New standards and guidelines to better equip facilities that are dealing with youth to ensure the proper care of this segment of the clientele

With improved organization, new visual features, and additional appendixes, the fourth edition offers a comprehensive and easy-to-use reference of health and fitness facility standards and guidelines. Readers can readily apply the information and save time and expense using over 30 templates found within the appendixes, including questionnaires, informed consent forms, and evaluation forms. Appendixes also contain more than 30 supplements, such as sample preventive maintenance schedules, checklists, and court and facility dimensions. Included in appendix A is

Blueprint for Excellence, which allows readers to search efficiently for specific information regarding the standards and guidelines within the book. Health and fitness facilities provide opportunities for individuals to become and remain physically active. As the use of exercise for health care prevention and prescription continues to gain momentum, health and fitness facilities and clubs will emerge as an integral part of the health care system. The fourth edition of ACSM's Health/Fitness Facility Standards and Guidelines will assist health and fitness facility managers, owners, and staff in keeping to a standard of operation, client care, and service that will assist members and users in caring for their health through safe and appropriate exercise experiences.
