📖 [A vos maths ECE](#) Sylvain Rondy, 2017-08-22 Voici la septième édition de A vos maths : elle contient les preuves de mathématiques du concours EDHEC proposées de 2006 à 2017 toujours suivies des barèmes qui ont été mis en place chaque année pour ce concours. Les corrigés sont proposés de nombreux conseils (méthode, réaction, aide à la résolution, fautes à éviter) qui permettront au lecteur de se mettre sur la bonne voie sans avoir à consulter trop vite le corrigé. Cet ouvrage est destiné à tous les étudiants des classes préparatoires aux grandes écoles de commerce (option économique), qu'ils soient en première ou en deuxième année (un tableau indique quels exercices peuvent être traités par un étudiant de première année). Il permettra à tous de travailler de deux façons distinctes : en premier lieu, un travail thématique pour lequel un tableau propose 33 thèmes possibles couvrant les quatre grandes parties du programme (analyse, algèbre linéaire, probabilités et informatique). Ensuite, un travail en temps réel consistant à se donner quatre heures pour traiter une preuve donnée (un tableau indique le temps conseillé pour chaque exercice).

📖 [A vos maths ECE](#) Sylvain Rondy, 2019-08-21 Epreuves de mathématiques du concours EDHEC proposées de 2008 à 2019 de l'option économique avec tous les corrigés proposés de nombreux conseils (méthode, réaction, aide à la résolution, fautes à éviter). Cet ouvrage couvre les quatre grandes parties du programme : analyse, algèbre linéaire, probabilités et informatique.

📖 [A vos maths](#) Sylvain Rondy, 2013 Voici la cinquième édition de A vos maths : elle contient les preuves de mathématiques du concours EDHEC, proposées de 2002 à 2013, toujours suivies des barèmes qui ont été mis en place chaque année pour ce concours. Les corrigés sont proposés de nombreux conseils (méthode, réaction, aide à la résolution, fautes à éviter) qui permettront au lecteur de se mettre sur la bonne voie sans avoir à consulter trop vite le corrigé. Cet ouvrage est destiné à tous les étudiants des classes préparatoires aux grandes écoles de commerce (option économique), qu'ils soient en première ou en deuxième année (un tableau indique quels exercices peuvent être traités par un étudiant de première année). Il permettra à tous de travailler de deux façons distinctes : En premier lieu, un travail thématique pour lequel un tableau propose 30 thèmes possibles couvrant les quatre grandes parties du programme (analyse, algèbre linéaire, probabilités et informatique). Ensuite, un travail en temps réel consistant à se donner quatre heures pour traiter une preuve donnée (un tableau indique le temps conseillé pour chaque exercice). Fort d'une longue expérience des concours, l'auteur, qui a écrit ce livre en pensant exclusivement aux étudiants et leurs éventuelles difficultés, souhaite qu'il profite pleinement à tous les futurs candidats, et pas seulement ceux qui présentent le concours EDHEC.

📖 [Mathematics and Technology](#) Christiane Rousseau, Yvan Saint-Aubin, 2008-10-29 This book introduces the student to numerous modern applications of mathematics in technology. The authors write with clarity and present the mathematics in a clear and straightforward way making it an interesting and easy book to read. Numerous exercises at the end of every section provide practice and reinforce the material in the chapter. An engaging quality of this book is that the authors also present the mathematical material in a historical context and not just the practical one. Mathematics and Technology is intended for undergraduate students in mathematics, instructors and high school teachers. Additionally, its lack of calculus centrality as well as a clear indication of the more difficult topics and relatively advanced references make it suitable for any curious individual with a decent command of high school math.

📖 [Twelve Years a Slave](#) Solomon Northup, 2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Northup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

📖 [Introduction to Algorithms, Third Edition](#) Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, 2009-07-31 The latest edition of the essential text and professional reference, with substantial new material on such topics as VEB trees, multithreaded algorithms, dynamic programming, and edge-based flow. Some books on algorithms are rigorous but incomplete; others cover masses of material but lack rigor. Introduction to Algorithms uniquely combines rigor and comprehensiveness. The book covers a broad range of algorithms in depth, yet makes their design and analysis accessible to all levels of readers. Each chapter is relatively self-contained and can be used as a unit of study. The algorithms are described in English and in a pseudocode designed to be readable by anyone who has done a little programming. The explanations have been kept elementary without sacrificing depth of coverage or mathematical rigor. The first edition became a widely used text in universities worldwide as well as the standard reference for professionals. The second edition featured new chapters on the role of algorithms, probabilistic analysis and randomized algorithms, and linear programming. The third edition has been revised and updated throughout. It includes two completely new chapters, on van Emde Boas trees and multithreaded algorithms, substantial additions to the chapter on recurrence (now called "Divide-and-Conquer"), and an appendix on matrices. It features improved treatment of dynamic programming and greedy algorithms and a new notion of edge-based flow in the material on flow networks. Many exercises and problems have been added for this edition. The international paperback edition is no longer available; the hardcover is available worldwide.

📖 [Global Sensitivity Analysis](#) Andrea Saltelli, Marco Ratto, Terry Andres, Francesca Campolongo, Jessica Cariboni, Debora Gatelli, Michaela Saisana, Stefano Tarantola, 2008-02-28 Complex mathematical and computational models are used in all areas of society and technology and yet model based science is increasingly contested or refuted, especially when models are applied to controversial themes in domains such as health, the environment or the economy. More stringent standards of proofs are demanded from model-based numbers, especially when these numbers represent potential financial losses, threats to human health or the state of the environment. Quantitative sensitivity analysis is generally agreed to be one such standard. Mathematical models are good at mapping assumptions into inferences. A modeller makes assumptions about laws pertaining to the system, about its status and a plethora of other, often arcane, system variables and internal model settings. To what extent can we rely on the model-based inference when most of these assumptions are fraught with uncertainties? Global Sensitivity Analysis offers an accessible treatment of such problems via quantitative sensitivity analysis, beginning with the first principles and guiding the reader through the full range of recommended practices with a rich set of solved exercises. The text explains the motivation for sensitivity analysis, reviews the required statistical concepts, and provides a guide to potential applications. The book: Provides a self-contained treatment of the subject, allowing readers to learn and practice global sensitivity analysis without further materials. Presents ways to frame the analysis, interpret its results, and avoid potential pitfalls. Features numerous exercises and solved problems to help illustrate the applications. Is authored by leading sensitivity analysis practitioners, combining a range of disciplinary backgrounds. Postgraduate students and practitioners in a wide range of subjects, including statistics, mathematics, engineering, physics, chemistry, environmental sciences, biology, toxicology, actuarial sciences, and econometrics will find much of use here. This book will prove equally valuable to engineers working on risk analysis and to financial analysts concerned with pricing and hedging.

📖 [Handbook of Research on Science Education, Volume II](#) Norman G. Lederman, Sandra K. Abell, 2014-07-11 Building on the foundation set in Volume I—a landmark synthesis of research in the field—Volume II is a comprehensive, state-of-the-art new volume highlighting new and emerging research perspectives. The contributors, all experts in their research areas, represent the international and gender diversity in the science education research community. The volume is organized around six themes: theory and methods of science education research; science learning; culture, gender, and society and science learning; science teaching; curriculum and assessment in science; science teacher education. Each chapter presents an integrative review of the research on the topic it addresses—pulling together the existing research, working to understand the historical trends and patterns in that body of scholarship, describing how the issue is conceptualized within the literature, how methods and theories have shaped the outcomes of the research, and where the strengths, weaknesses, and gaps are in the literature. Providing guidance to science education faculty and graduate students and leading to new insights and directions for future research, the Handbook of Research on Science Education, Volume II is an essential resource for the entire science education community.

📖 [Theoretical Numerical Analysis](#) Kendall Atkinson, Weimin Han, 2007-06-07 Mathematics is playing an ever more important role in the physical and biological sciences, provoking a blurring of boundaries between scientific disciplines and a resurgence of interest in the modern as well as the classical techniques of applied mathematics. This renewal of interest, both in research and teaching, has led to the establishment of the series: Texts in Applied Mathematics (TAM). The development of new courses is a natural consequence of a high level of excitement on the research frontier as newer techniques, such as numerical and symbolic computer systems, dynamical systems, and chaos, mix with and reinforce the traditional methods of applied mathematics. Thus, the purpose of this textbook series is to meet the current and future needs of these advances and to encourage the teaching of new courses. TAM will publish textbooks suitable for use in advanced undergraduate and beginning graduate courses, and will complement the Applied Mathematical Sciences (AMS) series, which will focus on advanced textbooks and research-level monographs.

📖 [ANGELS AND DEMONS IN ART](#) ROSA GIORGI, 2005 THIS SUMPTUOUSLY ILLUSTRATED VOLUME ANALYZES ARTISTS' REPRESENTATIONS OF ANGELS AND DEMONS AND HEAVEN AND HELL FROM THE JUDEO-CHRISTIAN TRADITION AND DESCRIBES HOW THESE ARTISTIC PORTRAYALS EVOLVED OVER TIME. AS WITH OTHER BOOKS IN THE GUIDE TO IMAGERY SERIES, THE GOAL OF THIS VOLUME IS TO HELP CONTEMPORARY ART ENTHUSIASTS DECODE THE SYMBOLIC MEANINGS IN THE GREAT MASTERWORKS OF WESTERN ART. THE FIRST CHAPTER TRACES THE DEVELOPMENT OF IMAGES OF THE CREATION AND THE AFTERWORLD FROM DESCRIPTIONS OF THEM IN THE SCRIPTURES THROUGH THEIR EVOLUTION IN LATER LITERARY AND PHILOSOPHICAL WORKS. THE FOLLOWING TWO CHAPTERS EXAMINE ARTISTS' DEPICTIONS OF THE TWO PATHS THAT HUMANS MAY TAKE, THE PATH OF EVIL OR THE PATH OF SALVATION, AND THE PUNISHMENTS OR REWARDS FOUND ON EACH. A CHAPTER ON THE JUDGMENT DAY AND THE END OF THE WORLD EXPLORES PORTRAYALS OF THE MYSTERIOUS WORLDS BETWEEN LIFE AND DEATH AND IN THE AFTERLIFE. FINALLY, THE AUTHOR LOOKS AT IMAGES OF ANGELIC AND DEMONIC BEINGS THEMSELVES AND HOW THEY CAME TO BE PORTRAYED WITH THE PHYSICAL ATTRIBUTES--WINGS, HALOS, HORNS, AND CLOVEN HOOVES--WITH WHICH WE ARE NOW SO FAMILIAR. THOROUGHLY RESEARCHED BY AN EXPERT IN THE FIELD OF ICONOGRAPHY, ANGELS AND DEMONS IN ART WILL DELIGHT READERS WITH AN INTEREST IN ART OR RELIGIOUS SYMBOLISM.
