Vision

Johannes Zanker

Sensation and Perception Harvey Richard Schiffman,1982 This book combines sensation and perception with all biological-sensory aspects of perception with all biological-sensory aspects of perception covered from an evolutionary point of view. It raises the key question: How do the senses gather and secure information about the outside world? This basic question is addressed by explaining how the physical world interacts with and stimulates the senses, and, in turn, how the sense and the nervous system transform, integrate, and process the stimulation. Sensation and Perception Stanley Coren,Clare Porac,Lawrence M. Ward,1984

Sensation & Perception Stanley Coren,Lawrence M. Ward,1989 Now updated and revised with more than 600 new research citations, new chapters, and effective new pedagogy, *Sensation and Perception*, Sixth Edition provides broad, theoretically balanced coverage, along with late-breaking discoveries and new thinking on how we see, hear, taste, smell, touch, and make sense of our world. Featuring do-it-yourself demonstrations of actual perceptual phenomena, Coren, Ward, and Enns's interactive approach to sensation and perception enables you to use your own senses to understand this fascinating and dynamic field. Book jacket.

Theories of Sensation A. F. Rawdon-Smith,2013-12-19 Originally published in 1938, this book presents a discussion regarding the nature of auditory and visual sensation. The text focuses mainly on the nature of the perceptual process. As Rawdon-Smith notes in the preface, 'I wish to be concerned more with the mechanism whereby our sensations arise than with what our sense organs can do.' Illustrative figures and a detailed bibliography are also contained. This book will be of value to anyone with an interest in sensory perception and the history of science.

Sensation and Perception Stanley Coren,Lawrence M. Ward,James T. Enns,1994 This highly acclaimed book provides a theoretically balanced introduction to the study of basic physiology and sensory responses. The authors survey a broad range of topics and present different theories and perspectives in controversial areas. * Demonstrations allow the reader to experience many of the perceptual phenomena firsthand using common household items or illustrations in the book. * Describes natural instances of perceptual phenomena to bring the subject matter to life.

Sensation & Perception Jeremy M. Wolfe,2006 Co-authored by experts in each of the five senses, this is an introductory text that gives students the descriptions of seeing, hearing, touching, smelling and tasting. It provides useful anecdotes and full-colour illustrations throughout. A companion website provides activities and demonstrations as well as additional reading topics.

Sensation and Perception Hugh J. Foley,Mary Bates,2019-08-14 Maintaining the strong pedagogy, abundant student-friendly examples, and engaging conversational style of the previous editions, the sixth edition of this introductory textbook makes technical scientific information accessible to those who are beginning to specialize in cognitive psychology. *Sensation and Perception*, Sixth Edition is newly available in a more affordable paperback version, making it ideal for undergraduate students. In this new edition Bates has built on Foley and Matlin's core text to add updates focusing on multisensory integration, neural plasticity, and cognitive neuroscience, as well as real-world examples and practical applications of psychological phenomena. The sixth edition retains the clear organization of previous versions, covering a wide range of core topics, from skin senses such as touch to chemical senses such as taste and smell, to our complex visual and auditory sensory systems. This book is essential reading for undergraduates and postgraduates studying courses on sensation and perception.

Sensation, Perception and Action Johannes Zanker,2010-03-02 With a style that is both detailed and

accessible, this new text from Johannes Zanker provides students with a solid understanding of how our sensory and perceptual systems operate, and interact with a dynamic world. It not only explains the scientific mechanisms involved, but discusses the costs and benefits of these mechanisms within an evolutionary, functional framework, to encourage important questions such as: What is a given sensory mechanism needed for? What kind of problem can it solve and what are its limitations? How does the environment determine how senses operate? How does action affect and facilitate perception? This unique, interdisciplinary framework allows students to see perceiving and acting as embedded in particular environments and directs them to think about the functional nature of these systems. The overall effect is an especially readable, authoritative text on Sensation, Perception and Action that really brings this fascinating topic to life.

Sensation and Perception Bennett L. Schwartz, John H. Krantz, 2017-12-27 This cutting edge text presents both a cognitive and neurocognitive perspective of modern sensation and perception, connecting concepts to real-world applications to provide the reader with a deeper theoretical understanding.

Sensation and Perception Margaret W. Matlin, 1988 This book sets the standard in bringing technical scientific information on the subject of sensation and perception to a wide audience with outstanding readability and thorough coverage. Retaining its traditionally clear and accessible writing style, this new edition boasts a thoroughly revised art program and over 1,300 new references. The motion chapter now focuses solely on visual motion perception, so it appears earlier in the book. In addition, the book includes thirteen In-Depth sections, each of which explore a current hot research topic to provide a sense of how researchers ask questions with subjects varying from the role of face recognition in eyewitness testimony to phantom limb perception.

Sensation and Perception Mike May, 2009 Examines how the human brain receives, processes, and comprehends information through the five senses.

Visual Experience Gary Hatfield, Sarah Allred, 2012-06-21 'Seeing' happens effortlessly and yet is endlessly complex. One of the most fascinating aspects of visual perception is its stability and constancy. As we shift our gaze or move about the world, the light projected onto the retinas is constantly changing. Yet the surrounding objects appear stable in their properties. Psychologists have long been interested in constancies, exploring questions such as: How good is constancy? Is constancy a fact about how things look, or is it a product of our beliefs and judgments about how things look? How can the contents of visual experience be studied experimentally? However, philosophers have long been interested in characterizing visual experience and have become widely interested in the constancies more recently. As psychologists and philosophers have interacted, new questions have arisen: should we regard any departure from constancy as a failure of the visual system, or might it be a reasonable or adaptive response? In what circumstances is 'seeing' highly conditioned by cognitive factors such as background assumptions, and in what circumstances not? Visual Experience explores size constancy and color constancy. It considers methodologies for studying conscious visual perception, efforts to describe visual experience in relation to constancy, what it means that constancy is not always perfect, and the conceptual resources needed for explaining visual experience. This interdisciplinary book is invaluable for both vision scientists and philosophers of mind.

Essentials of Sensation and Perception George Mather, 2014-01-21 The study of sensation and perception looks at how we acquire, process, and interpret information about the outside world. By describing key ideas from first principles, this straightforward introduction provides easy access to the basic concepts in the subject, and incorporates the most recent advances with useful historical background. The text takes a

uniquely integrative approach, highlighting fundamental findings that apply across all the senses - including vision, hearing, touch, pain, balance, smell and taste - rather than considering each sense in isolation. Several pedagogical features help students to engage with the material. 'Key Term' and 'Key Concept' boxes describe technical terms and concepts whilst 'Question' boxes relate the material to everyday questions about perception. Each chapter ends with suggestions for further reading, and the final chapter draws together the material from the previous chapters, summarizing the broad principles described, and outlining some major unresolved issues. Assuming no prior knowledge, this book is an accessible and up-to-date overview of the processes of human sensation and perception. Presented in full color, it is an ideal introduction for pre-undergraduate and first year undergraduate students on courses in psychology, as well as neuroscience and biology.

Sensation and Perception E. Bruce Goldstein,1995-11-01

Loose-leaf Version for Sensation and Perception Steven Yantis,Richard A. Abrams,2016-08-08 Like no other text, *Sensation and Perception* expertly introduces students to how we sense and perceive the world around us. Using clear and detailed explanations and highly effective illustrations the text illuminates the connections between mind, brain, and behavior in the realm of sensation and perception. Seamlessly integrating classic findings with cutting edge research in psychology, physiology and neuroscience *Sensation and Perception 2e* explores what questions researchers are seeking to answer to today and the methods of investigation they are using. *Sensation and Perception, Second Edition*, now includes 15 chapters, including separate chapters on motion perception, perception for action, olfaction, and gustation, and a new appendix on noise and signal detection theory The new edition introduces new coauthor Richard A. Abrams (Washington University).

Multisensory Object Perception in the Primate Brain Marcus Johannes Naumer,Jochen Kaiser,2010-07-03 It should come as no surprise to those interested in sensory processes that its research history is among the longest and richest of the many systematic efforts to understand how our bodies function. The continuing obsession with sensory systems is as much a re?ection of the fundamental need to understand how we experience the physical world as it is to understand how we become who we are based on those very experiences. The senses function as both portal and teacher, and their individual and collective properties have fascinated scientists and philosophers for millennia. In this context, the attention directed toward specifying their properties on a sense-by-sense basis that dominated sensory research in the 20th century seems a prelude to our current preoccupation with how they function in concert. Nevertheless, it was the concentrated effort on the operational principles of in- vidual senses that provided the depth of understanding necessary to inform current efforts to reveal how they act cooperatively. We know that the information provided by any individual sensory modality is not always veridical, but is subject to a myriad of modality-speci?c distortions. Thus, the brain's ability to compare across the senses and to integrate the information they provide is not only a way to examine the accuracy of any individual sensory channel but also a way to enhance the collective information they make available to the brain.

Sensory Experience, Adaptation, and Perception Lothar Spillman,Bill R. Wooten,2013-05-13 Published in 1983, *Sensory, Experience, Adaptation, and Perception* is a valuable contribution to the field of Cognitive Psychology.

Sensation and Perception Margaret W. Matlin,Hugh James Foley,1992 Provides coverage of all sensory processes from neurophysiology to cognitive perception. New features of this third edition include coverage of vision and hearing reorganized around systems, functions and pattern perception.

Foundations of Sensation and Perception George Mather,2022-11-30 *Foundations of Sensation and*

Perception offers a comprehensive and accessible introduction to the science of sensation and perception. It covers all the human senses and answers many questions, such as why movies are so convincing, how ventriloquism works, why things sound different as you get older and why you may feel ill in an aircraft or sea vessel. Full of illustrations and graphs that bring concepts to life, the textbook covers vision, hearing, balance, touch, pain, smell and taste. It discusses each sensory system through its fundamental neuroscience, major perceptual qualities and underlying coding principles. Each chapter includes reflective questions, key terms and information boxes and chapter summaries. Each chapter ends with a tutorial section which introduces more advanced areas of study in an accessible way (including measurement of light and Fourier analysis) as well as topics outside of the mainstream of sensation (including music perception, colour deficiencies and phantom limbs). The fourth edition of this bestselling textbook includes an extensive update of the text to reflect the latest research, a greater focus on balance and the body senses and a major reorganisation of the chapters for ease of use. It will be an invaluable resource for a wide range of undergraduate students in psychology, neuroscience and related disciplines.

Visual Perception Michael T. Swanson, Nicholas J. Wade, 2013-02-01 Vision is our most dominant sense, from which we derive most of our information about the world. From the light that enters the eye and the processing in the brain that follows we can sense where things are, how they move and what they are. The first edition of Visual Perception took a refreshingly different approach to perception, starting from the function that vision serves for an active observer in a three-dimensional environment. This fully revised and expanded new edition continues this approach in contrast to the traditional textbook treatment of vision as a catalogue of phenomena. Following a general introduction to the main theoretical approaches, the authors discuss the historical basis of our current knowledge. Placing the study of vision in its historical context, they look at how our ideas have been shaped by art, optics, biology and philosophy as well as psychology. Visual optics and the neurophysiology of vision are also described. The core of the book covers the perception of location, motion and object recognition. There is a new chapter on representation and vision, including a section on the perception of computer generated images. This readable, accessible and truly relevant introduction to the world of perception aims to elicit both independent thought and further study. It will be welcomed by students of visual perception and those with a general interest in the mysteries of vision.
