Mobile Learning in Higher Education in the Asia-Pacific Region Angela Murphy,Helen Farley,Laurel Evelyn Dyson,Hazel Jones,2017-07-06 If mobile technologies are to be effectively used in education, how do we best implement sustainable mobile solutions for teaching and learning? The aim of this handbook is to support educators and policy makers who are investing in

innovations in digital education to develop effective and sustainable mobile learning solutions for higher education environments. Authors from sixteen countries across the Asia-Pacific region have collaborated to share their experiences with developing and implementing mobile learning initiatives. These projects focus on a variety of aspects of mobile learning innovation, from the trial adoption of existing social media platforms on mobile devices and the development of specialised applications or mobile learning systems, to the large-scale, interuniversity implementation of technologies and pedagogies to support mobile learning. Each chapter addresses challenges and solutions at one or more levels of mobile learning innovation within the education system, encompassing the student perspective, the educator perspective, technical processes, policies and organisational strategy, and leadership. The book also offers a unique perspective on the integration of mobile learning innovations within the educational, political and cultural environments of Asia-Pacific countries.

Group Theory Predrag Cvitanović, 2020-05-26 If classical Lie groups preserve bilinear vector norms, what Lie groups preserve trilinear, quadrilinear, and

higher order invariants? Answering this question from a fresh and original perspective, Predrag Cvitanovic takes the reader on the amazing, four-thousand-diagram journey through the theory of Lie groups. This book is the first to systematically develop, explain, and apply diagrammatic projection operators to construct all semi-simple Lie algebras, both classical and exceptional. The invariant tensors are presented in a somewhat unconventional, but in recent years widely used, birdtracks notation inspired by the Feynman diagrams of quantum field theory. Notably, invariant tensor diagrams replace algebraic reasoning in carrying out all group-theoretic computations. The diagrammatic approach is particularly effective in evaluating complicated coefficients and group weights, and revealing symmetries hidden by conventional algebraic or index notations. The book covers most topics needed in applications from this new perspective: permutations, Young projection operators, spinorial representations, Casimir operators, and Dynkin indices. Beyond this well-traveled territory, more exotic vistas open up, such as negative dimensional relations between various groups and their representations. The most intriguing result of classifying primitive invariants is the emergence of all exceptional Lie groups in a single family, and the attendant pattern of exceptional and classical Lie groups, the so-called Magic Triangle. Written in a lively and personable style, the book is aimed at researchers and graduate students in theoretical physics and mathematics.

Troubleshooting Injection Moulding Vanessa Goodsgip,2004 Annotation
Injection moulding is one of the most commonly used processing technologies for plastics materials. Proper machine set up, part and mould design, and material selection can lead to high quality production. This review outlines common factors to check when preparing to injection mould components, so that costly mistakes can be avoided. This review examines the different types of surface defects that can be identified in plastics parts and looks at ways of solving these problems. Useful flow charts to illustrate possible ways forward are included. Case studies and a large b257 of figures make this a very useful report.

The Contemporary Medieval in Practice Clare A. Lees,Gillian R.

Overing,2019-10-07 Contemporary arts, both practice and methods, offer medieval scholars innovative ways to examine, explore, and reframe the past. Medievalists offer contemporary studies insights into cultural works of the past that have been made or reworked in the present. Creative-critical writing invites the adaptation of scholarly style using forms such as the dialogue, short essay, and the poem; these are, the authors argue, appropriate ways to explore innovative pathways from the contemporary to the medieval, and vice versa. Speculative and non-traditional, *The Contemporary Medieval in Practice* adapts the conventional scholarly essay to reflect its cross-disciplinary, creative subject. This book 'does' Medieval Studies differently by bringing it into relation with the field of contemporary arts and by making 'practice', in the sense used by contemporary arts and by creative-critical writing, central to it. Intersecting with a number of

urgent critical discourses and cultural practices, such as the study of the environment and the ethics of understanding bodies, identities, and histories, this short, accessible book offers medievalists a distinctive voice in multi-disciplinary, trans-chronological, collaborative conversations about the Humanities. Its subject is early medieval British culture, often termed Anglo-Saxon Studies (c. 500–1100), and its relation with, use of, and re-working in contemporary visual, poetic, and material culture (after 1950). 'The Contemporary Medieval in Practice is both wise and unafraid to take risks. Fully embedded in scholarship yet reaching into unmapped territory, the authors move across disciplines and forge surprising links. Thought-provoking and evocative, this is a book that will have an impact that far belies its modest length.' – Linda Anderson, Newcastle University
