Bill McCarty

Broken Bowels Jay Versluis, 2018-05-03 I was diagnosed with colon cancer when I was 43, in the summer of 2015. That's young for a cancer patient. The symptoms were weird and were not what is commonly associated with colon cancer. After major surgery in early 2016, the plan was to get me back on my feet within 6 months. Sadly, the common treatment method of chemotherapy did not work in my case. Turns out I have some genetic defects that lead to an aggressive form of uber nasty cancer, rendering most conventional treatment options useless. As a result, my hospital decided to turn me away, knowing they had no idea how to help me going forward. Seemingly left to die with no further treatment options, the power of the universe put me in touch with a crack team of doctors at Mount Sinai Hospital in Miami Beach. These people were not so easy to give up on me just yet. They suggested immunotherapy, the same treatment that miraculously cured Jimmy Carter. And it worked wonders! In only two months I went from a sleep deprived wreck, living with constant pain, unable to walk without a wheelchair or a stick, to cycling 10 miles a day. And all that without major side effects. If that's not a miracle then I don't know what is! **BROKEN BOWELS** is my personal account of these horrific yet truly amazing years I have endured. I've had countless chemotherapy and radiation treatments and survived terrible side effects. I've had 6 surgeries, I've had a colostomy for almost two years and an ileostomy for three months. I've lived without solid food for nearly a year, and for many months I've endured every type of catheter known to man, until I very nearly lost my whole bladder. My doctors call me a Super Survivor. supersurvivor.tv

The DARPA Robotics Challenge Finals: Humanoid Robots To The Rescue Matthew Spenko, Stephen Buerger, Karl Iagnemma, 2018-04-09
The DARPA Robotics Challenge was a robotics competition that took place in Pomona, California USA in June 2015. The competition was the culmination of 33 months of demanding work by 23 teams and required humanoid robots to perform challenging locomotion and manipulation tasks in a mock disaster site. The challenge was conceived as a response to the Japanese Fukushima nuclear disaster of March 2011. The Fukushima disaster was seen as an ideal candidate for robotic intervention since the risk of exposure to radiation prevented human responders from accessing the site. This volume, edited by Matthew Spenko, Stephen Buerger, and Karl Iagnemma, includes commentary by the organizers, overall analysis of the results, and documentation of the technical efforts of 15 competing teams. The book provides an important record of the successes and failures involved in the DARPA Robotics Challenge and provides guidance for future needs to be addressed by policy makers, funding agencies,

and the robotics research community. Many of the papers in this volume were initially published in a series of special issues of the Journal of Field Robotics. We have proudly collected versions of those papers in this STAR volume.

Practical Linux Forensics Bruce Nikkel, 2021-12-21 A resource to help forensic investigators locate, analyze, and understand digital evidence found on modern Linux systems after a crime, security incident or cyber attack. Practical Linux Forensics dives into the technical details of analyzing postmortem forensic images of Linux systems which have been misused, abused, or the target of malicious attacks. It helps forensic investigators locate and analyze digital evidence found on Linux desktops, servers, and IoT devices. Throughout the book, you learn how to identify digital artifacts which may be of interest to an investigation, draw logical conclusions, and reconstruct past activity from incidents. You'll learn how Linux works from a digital forensics and investigation perspective, and how to interpret evidence from Linux environments. The techniques shown are intended to be independent of the forensic analysis platforms and tools used. Learn how to: Extract evidence from storage devices and analyze partition tables, volume managers, popular Linux filesystems (Ext4, Btrfs, and Xfs), and encryption Investigate evidence from Linux logs, including traditional syslog, the systemd journal, kernel and audit logs, and logs from daemons and applications Reconstruct the Linux startup process, from boot loaders (UEFI and Grub) and kernel initialization, to systemd unit files and targets

leading up to a graphical login Perform analysis of power, temperature, and the physical environment of a Linux machine, and find evidence of sleep, hibernation, shutdowns, reboots, and crashes Examine installed software, including distro installers, package formats, and package management systems from Debian, Fedora, SUSE, Arch, and other distros Perform analysis of time and Locale settings, internationalization including language and keyboard settings, and geolocation on a Linux system Reconstruct user login sessions (shell, X11 and Wayland), desktops (Gnome, KDE, and others) and analyze keyrings, wallets, trash cans, clipboards, thumbnails, recent files and other desktop artifacts Analyze network configuration, including interfaces, addresses, network managers, DNS, wireless artifacts (Wi-Fi, Bluetooth, WWAN), VPNs (including WireGuard), firewalls, and proxy settings Identify traces of attached peripheral devices (PCI, USB, Thunderbolt, Bluetooth) including external storage, cameras, and mobiles, and reconstruct printing and scanning activity

Scorpion Christian Cantrell,2021-05-25 “An exceptional, fast-paced thriller featuring a tech-empowered assassin whose pattern and objective you’ve never seen before, chased by a heroine with tenacious grit.”—David Brin, author of *The Postman* and *Existence* Quinn Mitchell is a nine-to-five spy—an intelligence analyst for the CIA during the day, and a suburban wife and mother on evenings and weekends. After her young daughter is killed in a tragic accident, sending her life into a tailspin, Quinn hopes to find a new start in her latest assignment: investigating a series of bizarre international

assassinations whose victims have been found with numeric codes tattooed, burned, or carved into their flesh. As Quinn follows the killer's trail across the globe, always one body behind, she begins uncovering disturbing connections between the murders—and herself. Every lead she tracks down in pursuit of the assassin brings Quinn one step closer to the Epoch Index, a mysterious encrypted message discovered in the archives of the Large Hadron Collider. Its origins are unknown and decrypting it is beyond even the CIA. Yet nothing else can possibly link together a slew of unsolvable murders, an enigmatic and sophisticated serial killer who always seems to be three steps ahead, a quirky young physics prodigy whose knowledge extends well beyond her years, and, underlying everything, the inescapable tragedy of Quinn's own past. Discovering the meaning of the Epoch Index leads Quinn to a shocking twist that shatters everything she thought she knew about the past, the future, and the delicate balance of right and wrong that she must now fight to preserve.

Designing a More Inclusive World Simeon Keates, John Clarkson, Patrick Langdon, Peter Robinson, 2012-12-06 Designing inclusively is no longer an option for companies. It is a business essential. Global populations are getting older, legislation is increasingly prohibitive of unnecessary exclusion and consumer attitudes are beginning to change. Exclusivity is out, inclusivity is in. Research communities the world over are responding to this change in design emphasis. Conferences such as the Cambridge Workshops on Universal Access and Assistive Technology (CWUAAT) offer a forum for researchers from diverse and varied disciplines to bring their perspectives on inclusive design together. This book has been inspired by the second CWUAAT, held in Cambridge, England in March 2004.

It contains chapters from an international group of leading researchers in this field. Contributions focus on the following topics: design issues for universal access and assistive technology; enabling computer access and new technologies; and, assistive technology and rehabilitation robotics. This series of conferences is aimed at a broad range of interests, with a general focus on the development of products and solutions. Numerous case studies are used to raise awareness of the challenges faced in developing truly inclusive products, along with examples of good practice for design for a more inclusive world.
