Ronald O'Rourke

Ballistic Missile Defense Ashton B. Carter, David N. Schwartz, 2010-12-01

Defense against nuclear attack—so natural and seemingly so compelling a goal—has provoked debate for at least twenty years. Ballistic missile defense systems, formerly called antiballistic missile systems, offer the prospect of remedying both superpowers' alarming vulnerability to nuclear weapons by technological rather than political means. But whether ballistic missile defenses can be made to work and whether it is wise to build them remain controversial. The U.S.-Soviet Anti-Ballistic Missile Treaty of 1972 restricts testing and deployment of ballistic missile defenses but has not prohibited more than a decade of research and development on both sides. As exotic new proposals are put forward for space-based directed-energy systems, questions about the effectiveness and wisdom of missile defense have again become central to the national debate on defense policy. This study, jointly sponsored by the Brookings Institution and the Massachusetts Institute of Technology, examines the strategic, technological, and political issues raised by ballistic missile defense. Eight contributors take an analytical approach to their areas of expertise, which include the relationship of missile defense to nuclear strategy, the nature and potential applications of current and future technologies, the views on missile defense in the Soviet Union and among the smaller nuclear powers, the meaning of the Anti-Ballistic Missile Treaty for today's technology, and the present role and historical

legacy of ballistic missile defense in the context of East-West relations. The volume editors give a comprehensive introduction to this wide range of subjects and an assessment of future prospects. In the final chapter, nine knowledgeable observers offer their varied personal views on the ballistic missile defense question.

Advances in Missile Guidance, Control, and Estimation S.N. Balakrishnan, A. Tsourdos, B.A. White, 2016-04-19 Stringent demands on modern guided weapon systems require new approaches to guidance, control, and estimation. There are requirements for pinpoint accuracy, low cost per round, easy upgrade paths, enhanced performance in counter-measure environments, and the ability to track low-observable targets. Advances in Missile Guidance, Control, and Estimat

Ballistic Missile Defense Ayoub Vermeirsch, 2013 The ballistic missile threat is increasing both quantitatively and qualitatively, and is likely to continue to do so over the next decade. Current global trends indicate that ballistic missile systems are becoming more flexible, mobile, survivable, reliable, and accurate, while also increasing in range. A number of states are also working to increase the protection of their ballistic missiles from pre-launch attack and to increase their effectiveness in penetrating missile defences. Several states are also developing nuclear, chemical, and/or biological warheads for their missiles. Such capabilities could be significant sources of military advantage during a conflict. But they may be

equally significant in times of relative peace, when they undergird efforts to coerce states near and far. Regional actors such as North Korea and Iran continue to develop long-range missiles that will be threatening to the United States. There is some uncertainty about when and how this type of intercontinental ballistic missile (ICBM) threat to the U.S. homeland will mature, but there is no uncertainty about the existence of regional threats. They are clear and present. The threat from short- range, medium-range, and intermediate-range ballistic missiles (SRBMs, MRBMs, and IRBMs) in regions where the United States deploys forces and maintains security relationships is growing at a particularly rapid pace. This book provides an overview of select issues and policies of the ballistic missile defence program.

Missile Guidance and Control Systems George M. Siouris, 2006-05-07 Airborne Vehicle Guidance and Control Systems is a broad and wide- angled engineering and technological area for research, and continues to be important not only in military defense systems but also in industrial process control and in commercial transportation networks such as various Global Positioning Systems (GPS). The book fills a long-standing gap in the literature. The author is retired from the Air Force Institute and received the Air Force's Outstanding Civilian Career Service Award.

Sea-Based Ballistic Missile Defense Ronald O'Rourke, 2011 This is a print on demand edition of a hard to find publication. The proposed FY 2010 defense budget requests \$1,859.5 million for the Aegis Ballistic Missile Defense (BMD) program. The issue for Congress discussed in this report is: What should be the role of sea-based systems in U.S. ballistic missile defense, and are DoD's programs for sea-based BMD capabilities appropriately structured and funded? Potential issues for Congress re: sea-based BMD systems include the number of SM-3 interceptors planned for procurement, whether development of a far-term sea-based terminal defense BMD capability should be accelerated, technical risk in the Aegis BMD program, the number of Aegis BMD ships, and the role of Aegis BMD in European missile defense. Illustrations.

Ballistic Missile Defense, 1993

Ballistic Missile Defense and Offensive Arms Reductions Steven A. Hildreth, 2010-11 Ballistic missile defenses (BMD) have been an issue in U.S.-Soviet and U.S.-Russian arms control talks since the 1970s. During the Cold

War, the nations sought to balance limits on offensive weapons and defensive weapons so that they could maintain *strategic stability*, which refers to the ability of each side to launch a retaliatory strike after absorbing a first strike by the other side. Contents of this report: (1) Intro.; (2) Strategic Stability and the Relationship Between Offensive and Defensive Forces; (3) BMD and the 1991 START Treaty: The Negotiating Framework; START Ratification; Resolving Competing Priorities; BMD Programs and Budgets; BMD in the 1980s, and 1990s; Current BMD Plans and Programs; (4) BMD Budgets Over Time.

Making Sense of Ballistic Missile Defense National Research Council, Division on Engineering and Physical Sciences, Committee on an Assessment of Concepts and Systems for U.S. Boost-Phase Missile Defense in Comparison to Other Alternatives, 2012-12-28 The Committee on an Assessment of Concepts and Systems for U.S. Boost-Phase Missile Defense in Comparison to Other Alternatives set forth to provide an assessment of the feasibility, practicality, and affordability of U.S. boost-phase missile defense compared with that of the U.S. non-boost missile defense when countering short-, medium-, and intermediate-range ballistic missile threats from rogue states to deployed forces of the United States and its allies and defending the territory of the United States against limited ballistic missile attack. To provide a context for this analysis of present and proposed U.S. boost-phase and non-boost missile defense concepts and systems, the committee considered

the following to be the missions for ballistic missile defense (BMD): protecting of the U.S. homeland against nuclear weapons and other weapons of mass destruction (WMD); or conventional ballistic missile attacks; protection of U.S. forces, including military bases, logistics, command and control facilities, and deployed forces, including military bases, logistics, and command and control facilities. They also considered deployed forces themselves in theaters of operation against ballistic missile attacks armed with WMD or conventional munitions, and protection of U.S. allies, partners, and host nations against ballistic-missile-delivered WMD and conventional weapons. Consistent with U.S. policy and the congressional tasking, the committee conducted its analysis on the basis that it is not a mission of U.S. BMD systems to defend against large-scale deliberate nuclear attacks by Russia or China. Making Sense of Ballistic Missile Defense: An Assessment of Concepts and Systems for U.S. Boost-Phase Missile Defense in Comparison to Other Alternatives suggests that great care should be taken by the U.S. in ensuring that negotiations on space agreements not adversely impact missile defense effectiveness. This report also explains in further detail the findings of the committee, makes recommendations, and sets guidelines for the future of ballistic missile defense research.

Navy Aegis Ballistic Missile Defense (BMD) Program Ronald O'Rourke, 2011-05
The Aegis BMD program gives Navy Aegis cruisers and destroyers a capability for conducting BMD operations. Under current plans, the number of BMD-capable

Navy Aegis ships is scheduled to grow from 20 at the end of FY 2010 to 38 at the end of FY 2015. Contents of this report: (1) Intro.; (2) Background: Planned Quantities of Ships, Ashore Sites, and Interceptor Missiles; Aegis BMD Flight Tests; Allied Participation and Interest in Aegis BMD Program; (3) Issues for Congress: Demands for BMD-Capable Aegis Ships; Demands for Aegis Ships in General; Numbers of SM-3 Interceptors; SM-2 Block IV Capability for 4.0.1 and Higher Versions; (4) Legislative Activity for FY 2011. Ballistic Missile Defense Technologies United States. Congress. Office of Technology Assessment, 1985

Ballistic Missile Defense Charles R. Grizzle, 1994 Summarizes information on the evolution and progress of the Strategic Defense Initiative (SDI) program and the current issues in funding ballistic missile defense R&D. Traces the evolution of the program, the role of the DoD oversight boards, the investments in major programs, and the progress relevant to systems proposed for theater missile defense and national missile defense. Also includes: technology spinoffs, suborbital and orbital launches to support testing, and nuclear power for space use. Charts and tables. Bibliography.

Directed energy missile defense in space , 1984 This Background Paper describes and assesses current concepts for directed-energy ballistic missile defense in space. Its purpose is to provide Members of Congress, their staffs, and the public with a readable introduction to the so-called 'Star

Wars' technologies that some suggest might form the basis of a future nationwide defense against Soviet nuclear ballistic missiles. Since these technologies are a relatively new focus for U.S. missile defense efforts, little information about them has been readily available outside the expert community. Directed-energy or 'beam' weapons comprise chemical lasers, excimer and free electron lasers, nuclear bomb-powered x-ray lasers, neutral and charged particle beams, kinetic energy weapons, and microwave weapons. In addition to describing these devices, this Background Paper assesses the prospects for fashioning from such weapons robust and reliable wartime defense systems resistant to Soviet countermeasures. The assessment distinguishes the prospects for perfect or near-perfect protection of U.S. cities and population from the prospects that technology will achieve a modest, less-than-perfect level of performance that will nonetheless be seen by some experts as having strategic value. Though the focus is technical, the Paper also discusses, but does not assess in detail, the strategic and arms control implications of a major U.S. move to develop and deploy ballistic missile defense (BMD).

Regional Ballistic Missile Defense in the Context of Strategic Stability
Russian Academy of Sciences, National Academy of Sciences, Policy and Global Affairs, Committee on International Security and Arms Control, Joint Committee on Ballistic Missile Defense in the Context of Strategic Stability, 2019-12-13
As ballistic missile technology proliferates, and as ballistic missile

defenses are deployed by both the Russian Federation and the United States, it is increasingly important for these two countries to seek ways to reap the benefits of systems that can protect their own national security interests against limited missile attacks from third countries without undermining the strategic balance that the two governments maintain to ensure stability. *Regional Ballistic Missile Defense in the Context of Strategic Stability* examines both the technical implications of planned missile defense deployments for Russian and U.S. strategic deterrents and the benefits and disadvantages of a range of options for cooperation on missile defense.

Nuclear Arms Control National Academy of Sciences, Policy and Global Affairs, Office of International Affairs, Committee on International Security and Arms Control, 1985-02-01 This nontechnical overview of developments in nuclear arms control describes how the United States and the Soviet Union arrived at their present positions-and where they might go from here. According to Foreign Affairs, This book is proof that the complexities of arms control can be successfully explained in a nontechnical, and even more importantly, nonpartisan manner....It presents the key issues in a clear, thorough, and remarkably up-to-date way....Strongly recommended as a primary source for classroom and public discussions.

Conventional Prompt Global Strike (PGS) and Long-Range Ballistic Missiles (BM) Amy F. Woolf, 2011-08 Contents: (1) Intro.; (2) Background: Rationale for the PGS Mission; PGS and the U.S. Strategic Command; Potential Targets for

the PGS Mission; Conventional BM and the PGS Mission; (3) Plans and Programs: Navy Programs: Reentry Vehicle Research; Conventional Trident Modification; Sub.-Launched Intermediate-Range BM; Air Force Programs: The FALCON Study; Reentry Vehicle Research and Warhead Options; Missile Options; Defense-Wide Conventional PGS: The Conventional Strike Missile; Hypersonic Test Vehicle; Army Advanced Hypersonic Weapon; ArcLight; (4) Issues for Congress: Assessing the Rationale for CPGS; Reviewing the Alternatives; Arms Control Issues. A print on demand report.

Alternatives for Boost-phase Missile Defense, 2004 Examines technical, operational, and cost issues related to using a boost-phase intercept (BPI) system to defend the United States against intercontinental ballistic missiles.

Regional Missile Defense from a Global Perspective Catherine McArdle Kelleher, Peter Dombrowski, 2015-09-23 Regional Missile Defense from a Global Perspective explains the origins, evolution, and implications of the regional approach to missile defense that has emerged since the presidency of George H. W. Bush, and has culminated with the missile defense decisions of President Barack Obama. The Obama administration's overarching concept for American missile defense focuses on developing both a national system of limited ground-based defenses, located in Alaska and California, intended to counter limited intercontinental threats, and regionally-based missile defenses consisting of mobile ground-based technologies like the Patriot

PAC-3 system, and sea-based Aegis-equipped destroyer and cruisers. The volume is intended to stimulate renewed debates in strategic studies and public policy circles over the contribution of regional and national missile defense to global security. Written from a range of perspectives by practitioners and academics, the book provides a rich source for understanding the technologies, history, diplomacy, and strategic implications of the gradual evolution of American missile defense plans. Experts and non-experts alike—whether needing to examine the offense-defense tradeoffs anew, to engage with a policy update, or to better understand the debate as it relates to a country or region—will find this book invaluable. While it opens the door to the debates, however, it does not find or offer easy solutions—because they do not exist.

Defending America James M. Lindsay, Michael E. O'Hanlon, 2004-05-13 Arms control and missile defense are once again at the forefront of the American national security agenda. Not surprisingly, the debate has broken down along well-worn lines. Arms control advocates dismiss the idea of missile defense as a dangerous and costly folly. Missile defense advocates argue that the U.S. should move aggressively to defend itself against missile attack. With clear and lively prose free of partisan rhetoric, *Defending America* provides reliable, factual analysis of the missile defense debate. Written for a general audience, it assesses the current and likely future missile threat to the United States, examines relevant technologies, and suggests how America's

friends and foes would react to a decision to build a national missile defense. Lindsay and O'Hanlon reject calls for large-scale systems as well as proposals to do nothing, instead arguing for a limited national missile defense.
