Functional Electrical Stimulation in Neurorehabilitation Thomas Schick,2022-05-26 This book explains to physical therapists, occupational therapists, speech therapists, interested physicians and clinicians the theoretical and practical applications of single- to multi-channel functional electrical stimulation for a wide range of neurological symptoms. The targeted electrical stimulation of several muscle groups, timed to each other, can initiate and support a complete movement sequence and thus improve motor learning. Renowned experts from research and practice have compiled numerous application examples based on the available evidence in this comprehensive form for the first time. In addition, the reader will find exciting and informative contributions to the current study situation and effectiveness analyses. The text is enriched by videos on EMG-triggered functional multichannel electrical stimulation, stimulation of muscle groups in lower motor neuron lesions, and FES therapy approaches for dysarthria and swallowing disorders. From the contents: - FES in lesions of the upper motoneuron, lesion of the lower motoneuron and mixed forms - Combination of FES with mirror therapy and botulinum toxin - Motor learning, neuroplasticity, ICF-based goal setting and the use in home-based therapy - Basic principles, current parameters and their implications - FES in rehabilitation of facial paralysis, unilateral vocal fold paralysis, dysarthria and dysphagia, and neuro-urological deficits

Clinical Pathways in Stroke Rehabilitation Thomas Platz,2021-01-14 This open access book focuses on practical clinical problems that are frequently encountered in stroke rehabilitation. Consequences of diseases, e.g. impairments and activity limitations, are addressed in rehabilitation with the overall goal to reduce disability and promote participation. Based on the available best external evidence, clinical pathways are described for stroke rehabilitation bridging the gap between clinical evidence and clinical decision-making. The clinical pathways answer the questions which rehabilitation treatment options are beneficial to overcome specific impairment constellations and activity limitations and are well acceptable to stroke survivors, as well as when and in which settings to provide rehabilitation over the course of recovery post stroke. Each chapter starts with a description of the clinical problem encountered. This is followed by a systematic, but concise review of the evidence (RCTs, systematic reviews and meta-analyses) that is relevant for clinical decision-making, and comments on assessment, therapy (training, technology, medication), and the use of technical aids as appropriate. Based on these summaries, clinical algorithms / pathways are provided and the main clinical-decision situations are portrayed. The book is invaluable for all neurorehabilitation team members, clinicians, nurses, and therapists in neurology, physical medicine and rehabilitation, and related fields. It is a World Federation for NeuroRehabilitation (WFNR) educational initiative, bridging the gap between the rapidly expanding clinical research in stroke rehabilitation and clinical practice across societies and continents. It can be used for both clinical decision-making for individuals and as well as clinical background knowledge for stroke rehabilitation service development initiatives.

ICF-basiertes Training in der Neurorehabilitation Karin Lotter, 2021-11-22 Physiotherapeutische Rehabilitation in der Neurologie mit der ICF führt hin zu einer hohen Lebensqualität der Patient_innen auch bei funktionaler und struktureller Beeinträchtigung. ICF in der Neurorehabilitation Die International Classification of Functioning, Disability and Health (ICF) der WHO stützt sich auf das bio-psycho-soziale Modell: Es orientiert sich an der Frage, wie Patient_innen und Klient_innen trotz und mit Beeinträchtigungen eine hohe Lebensqualität und Wohlbefinden gewinnen. Damit setzt sie einen neuen Maßstab in der Gesundheitsversorgung und erklärt die funktionale Gesundheit des Menschen, seine Teilhabe und Umweltbedingungen zum Schwerpunkt der professionellen Dienste der Gesundheitsberufe. Das Fachbuch stellt ein ICF-basiertes Training als Konzept für die physiotherapeutische Therapieplanung vor, evidenzbasiert auf Erkenntnissen der neurologischen Rehabilitation. Es verortet die Beschwerden neurologischer Patienten in die Struktur der ICF und unterstützt die Auswahl geeigneter Instrumente zur Messung und Befundung (Assessments), damit sie differenziert und umfassend erhoben werden können. Daran schließt sich die Auswahl und Anwendung der therapeutischen Maßnahmen an. Es bietet daher ein weites Spektrum für das professionelle Handeln der Physiotherapie und unterstützt die interdisziplinäre Zusammenarbeit. Zur Struktur des Inhalts: •Grundlagen der ICF für die Neurorehabilitation •ICF-basiertes Training: Assessment, Diagnostik, Planung, Therapieziele, Behandlung •Fallbeispiele und Erkrankungen: Schlaganfall, Multiple Sklerose, Ideopathisches Parkinson-Syndrom (IPS), Querschnittsläsion (QS)

Functional Evaluation of Stroke Patients Naoichi Chino, John L. Melvin, 2012-12-06 Stroke is one of the major causes of disability in the world. Consequently, an effective rehabilitation regimen is the goal of specialists working in the field worldwide. The implementation of rehabilitation programs for the stroke patient is broad in scope and requires, first of all, an objective scientific evaluation method. In 1980 the World Health Organization developed the International Classification of Impairments, Disabilities, and Handicaps. It categorized impairments and disabilities on the basis of functional evaluation but took into account cultural and socio-economic factors when defining handicaps, thus making it difficult to use the same functional evaluation instrument for the three phenomena. In this monograph, experts in the treatment of stroke from Japan, the United States, and Europe share their ideas presented during the 31st Annual Convention of the Japanese Association of Rehabilitation Medicine held in June 1994. All the participants freely contributed their views on the functional assessment and prognosis of stroke patients. Indeed, their contributions shed light on possible breakthroughs in the future for the development of rehabilitation regimens for stroke patients.

Soziale Teilhabe bei Menschen nach einem Schlaganfall Stephan Dettmers, 2014-02-19 Die soziale Teilhabe von Menschen nach einem erlittenen Schlaganfall und ihren familiären Unterstützungspersonen hat wissenschaftlich bislang wenig Beachtung gefunden, v.a. nicht in Relation zur biomedizinischen Forschung. Welche Impulse lassen sich für die Verbesserung der Behandlungsstrukturen für die Betroffenen ableiten? Und welche Konsequenzen ergeben sich für die klinische Sozialarbeit?
