*Mentoring Programs That Work* Jenn Labin, 2017-02-15 Amazing Benefits, Unique Risks A stellar mentor can change the trajectory of a career. And an enduring mentoring program can become an organization's most powerful talent development tool. But fixing a "broken" mentoring program or developing a new program from scratch requires a unique process, not a standard training methodology. Over the course of her career, seasoned program development specialist Jenn Labin has encountered dozens of mentoring programs unable to stand the test of their organizations' natural talent

cycles. These programs applied a training methodology to a nontraining solution and were ineffective at best and poorly designed at worst. What's needed is a solid planning framework developed from hands-on experimentation. And you'll find it here. *Mentoring Programs That Work* is framed around Labin's AXLES model—the first framework devoted to the unique challenges of a sustained learning process. This step-by-step approach will help you navigate the early phases of mentoring program alignment all the way through program launch and measurement. Whether your goal is to recruit and retain Millennials or deepen organizational commitment, it's time to embrace mentoring as one of the most powerful tools of talent development. *Mentoring Programs That Work* will help your organization succeed by building mentoring programs that connect people and inspire learning transfer.

**The Discipline of Organizing** Robert J. Glushko, 2013-05-17 A framework for the theory and practice of organizing that integrates the concepts and methods of information organization and information retrieval. Organizing is such a common activity that we often do it without thinking much about it. In our daily lives we organize physical things—books on shelves, cutlery in kitchen drawers—and digital things—Web pages, MP3 files, scientific datasets. Millions of people create and browse Web sites, blog, tag, tweet, and upload and download content of all media types without thinking “I'm organizing now” or “I'm retrieving now.” This book offers a framework for the theory and practice of organizing that integrates information organization (IO) and information retrieval (IR), bridging the disciplinary chasms between Library and Information Science and Computer Science, each of which views and teaches IO and IR as separate topics and in substantially different ways. It introduces the unifying concept of an Organizing System—an intentionally arranged collection of resources and the interactions they support—and then explains the key concepts and challenges in the design and deployment of

Organizing Systems in many domains, including libraries, museums, business information systems, personal information management, and social computing. Intended for classroom use or as a professional reference, the book covers the activities common to all organizing systems: identifying resources to be organized; organizing resources by describing and classifying them; designing resource-based interactions; and maintaining resources and organization over time. The book is extensively annotated with disciplinary-specific notes to ground it with relevant concepts and references of library science, computing, cognitive science, law, and business.

*Faculty Mentoring* Susan L. Phillips, Susan T. Dennison, 2023-07-03 Faculty mentoring programs greatly benefit the institutions that have instituted them, and are effective in attracting and retaining good faculty. Prospective faculty members commonly ask about mentoring at on-campus interviews, and indicate that it is a consideration when choosing a position. Mentoring programs also increase the retention rate of junior faculty, greatly reducing recruitment costs, and particularly help integrate women, minority and international faculty members into the institution, while providing all new hires with an orientation to the culture, mission and identity of the college or university. The book provides step-by-step guidelines for setting up, planning, and facilitating mentoring programs for new faculty members, whether one-on-one, or using a successful group model developed and refined over twenty-five years by the authors. While it offers detailed guidance on instituting such programs at the departmental level, it also makes the case for establishing school or institutional level programs, and delineates the considerable benefits and economies of scale these can achieve. The authors provide guidance for mentors and mentees on developing group mentoring and individual mentor / protégé relationships – the corresponding chapters being available online for separate purchase; as well as detailed outlines and advice to department chairs, administrators and facilitators on how to establish and conduct institution-wide group mentoring programs, and apply or modify the material to meet their specific needs. For training and faculty development purposes, we also offer two chapters as individual e-booklets. Each respectively provides a succinct summary of the roles and expectations of the roles of Mentor and Mentee. *Faculty Mentoring / Mentor Guide* *Faculty Mentoring / Mentee Guide* The booklets are affordably priced, and intended for individual purchase by mentors and mentees, and are only available through our Web site.

**A Celebration of the EDGE Program's Impact on the Mathematics Community and Beyond** Susan D'Agostino, Sarah Bryant, Amy Buchmann, Michelle Craddock Guinn, Leona Harris, 2019-08-31 The Enhancing Diversity in Graduate Education (EDGE) Program began twenty years ago to provide support

for women entering doctoral programs in the mathematical sciences. With a steadfast commitment to diversity among participants, faculty, and staff, EDGE initially alternated between Bryn Mawr and Spelman Colleges. In later years, EDGE has been hosted on campuses around the nation and expanded to offer support for women throughout their graduate school and professional careers. The refereed papers in *A Celebration of the EDGE Program's Impact on the Mathematics Community and Beyond* range from short memoirs, to pedagogical studies, to current mathematics research. All papers are written by former EDGE participants, mentors, instructors, directors, and others connected to EDGE. Together, these papers offer compelling testimony that EDGE has produced a diverse new generation of leaders in the mathematics community. This volume contains technical and non-technical works, and it is intended for a far-reaching audience, including mathematicians, mathematics teachers, diversity officers, university administrators, government employees writing educational or science policy, and mathematics students at the high school, college, and graduate levels. By highlighting the scope of the work done by those supported by EDGE, the volume offers strong evidence of the American Mathematical Society's recognition that EDGE is a program that makes a difference." This volume offers unique testimony that a 20-year old summer program has expanded its reach beyond the summer experience to produce a diverse new generation of women leaders, nearly half of whom are underrepresented women. While some books with a women-in-math theme focus only on one topic such as research or work-life balance, this book's broad scope includes papers on mathematics research, teaching, outreach, and career paths.

*Creating a Mentoring Program* Annabelle Reitman, Sylvia Ramirez Benatti, 2014-04-21 Engage your employees with a mentoring program that spans across the generations. With a workforce full of varying degrees of experience, the focus is often on the challenges of balancing a multigenerational staff. But what can be overlooked is what these generations can learn from each other. Senior members in organizations have expressed that they continually want to learn—and not only teach. These findings lead Reitman and Benatti to create the Mentoring Partnership Model, which is a way for new and seasoned employees to partner and learn from each other. This book is a two-part presentation of how to implement this model into your organization: a facilitator's handbook outlining the process and a participant's workbook complete with worksheets and templates. Use the Mentoring Partnership Model to pass on knowledge and retain and engage employees. Covers the characteristics of an effective mentor and why mentoring works. Offers step-by-step instructions of each stage of the program. Includes the worksheets, evaluation forms, and checklists to use in your program. About

the Companion Workbook *Creating a Mentoring Program: Partner's Workbook* features worksheets, exercises, and evaluations developed specifically for Mentoring Partnerships Program participants. The digital workbook is customized to enable participants to complete, save, update, and print forms as they progress through the program.

Handbook of Psychological Assessment, Case Conceptualization, and Treatment, Volume 2 Michel Hersen, David Reitman, 2008-05-13 Edited by recognized experts Michel Hersen and David Reitman, *Handbook of Psychological Assessment, Case Conceptualization, and Treatment, Volume 2, Children and Adolescents*, is a thorough and practical reference for those working with children and adolescents. Bringing together the most current theories and evidence-based applications, chapters address issues of importance including depressive disorders, substance use disorders, and childhood psychosis. Each chapter follows a structured format, opening with an overview of assessment, followed by case conceptualization, and, finally, recommended treatment.

*The Discipline of Organizing: Informatics Edition* Robert J. Glushko, 2016-08-05 We organize things. We organize information, information about things, and information about information. Organizing is a fundamental issue in many professional fields, but these fields have only limited agreement in how they approach problems of organizing and in what they seek as their solutions. *The Discipline of Organizing* synthesizes insights from library science, information science, computer science, cognitive science, systems analysis, business, and other disciplines to create an Organizing System for understanding organizing. This framework is robust and forward-looking, enabling effective sharing of insights and design patterns between disciplines that weren't possible before. The 4th edition of this award-winning and widely adopted text adds content to bridge between the foundations of organizing systems and the new statistical and computational techniques of data science because at its core, data science is about how resources are described and organized. The 4th edition reframes descriptive statistics as organizing techniques, expands the treatment of classification to include computational methods, and incorporates many new examples of data-driven resource selection, organization, maintenance, and personalization. The Informatics edition contains all the new content related to data science, but omits the discipline-specific content about library science, museums, and document archives.

The Good Teacher Mentor Sidney Trubowitz, Maureen Picard Robins, 2003-01-01 As districts across the U.S. struggle to find and retain qualified

teachers, more and more schools are turning to mentoring as a solution. Data suggests that mentors not only guide and orient new teachers, but also help to keep them in the profession. But what makes mentoring successful? This book is a rare, behind-the-scenes view of mentoring that lays bare the actions of both partners and shows how mentoring actually worked in an urban public middle school. Follow the experience of Trubowitz (an education professor-emeritus) and Robins (a first-year teacher) as they tackle everything from classroom management to the politics of paperwork. Their story, told in two voices, describes the day-to-day flow of events in such a way that readers feel the satisfactions, the frustrations, and the sense of fulfillment that are all part of becoming a teacher. The authors share their initial reluctance about entering a mentoring relationship, debate the merits of observation in the classroom, describe a lesson that failed, explore the school community, prepare for parent-teacher conferences, deal with standardized tests, and review what they learned as a result of working together for a year. Beyond supporting new teachers, mentor programs also give veteran teachers a chance to pass on their valuable experience and to reflect on their own practice. This volume also includes checklists for good mentoring and suggestions for improvement and future learning.

How to Start a Student Mentor Program Susan G. Weinberger, 1992 This booklet discusses mentoring in general, describes a particular mentoring program, and describes mentoring efforts around the country. The first section about mentoring in general focuses on mentoring as an old idea and current trends in mentoring. The next section describes the Norwalk Mentor Program in Connecticut which began in 1986 as an outgrowth of a well-established adopt-a-school program. The six-step process used to begin and maintain this program and to evaluate the success of the relationship between mentors and students is presented. These steps involve: (1) recruitment and screening; (2) orientation and training; (3) matching mentors and students and responsibilities; (4) weekly sessions; (5) evaluation; and (6) year-end celebrations and renewal. The buddy system, transfers and moves, summer activities, family involvement, and new directions for Norwalk's mentor program are also described. The third section presents an overview of mentoring efforts around the country. Also included are: a resource list; sample recruitment letter; sample mentor profile; mentor pledge; sample mentor agreement; sample teacher request for a mentor; sample parent permission letter; sample mentor evaluation form; and references. **Information Technology in Health Science Education** E. de Land,2013-11-11 This first volume is but an introduction to the growing use of computer-based systems in health-science education. It is unlikely that the intellectual or applied system constructs herein are either exhaustive of the field or immutable; growth is inevitable. For one thing, the field is still fractured and loosely organized, which is an inevitable description of an adolescent science in a rich mine of ideas. There is emerging, however, an organizing concept. A short look into the future indicates that educational system design will be dominated by a concept which, for want of a better term, we may call an information system. Actually, this term derives from an early New York World's Fair exhibition designed by Charles Eames entitled the Informational Machine, in which the designer illustrated once again his insight into the future by showing how in a fundamental manner the digital computer promised to affect and to change our lives; and this change is by no means completed. Even during the publication of this volume, the basic sciences requisite to the development of an information machine have evolved significantly. The three intellectual areas to watch are developments in artificial intelligence, graphics and man/machine interaction, and basic component and computer system design.

*The Power of Being Divisive* Thomas J. Roulet,2020-09-01 In the last decade, research on negative social evaluations, from adverse reputation to extreme stigmatization, has burgeoned both at the individual and organizational level. Thus far, this research has largely focused on major corporate risks. Corporate public relations and business executives intuitively know that a negative image deters important relationships—from customers and partners, to applicants, stakeholders, and potential funding. At the same time, business is conducted in an age of heightened connection, including

digital platforms for criticism and a 24-hour news cycle. Executives know that some degree of public disapproval is increasingly unavoidable. Negative social evaluations can also put social actors on the map. In the era of identity politics, many political leaders express controversial views to appeal to specific audiences and gain in popularity. Through network and signaling effects, being controversial can potentially pay off. Thomas J. Roulet offers a framework for understanding not only how individuals and organizations can survive in an age of increasing scrutiny, but how negative social evaluations can surprisingly yield positive results. A growing body of work has begun to show that being up against the rest is an active driver of corporate identity, and that firms that face strong public hostility can benefit from internal bonding. Synthesizing this work with his original research, and drawing comparisons to work on misconduct and scandals, Roulet addresses an important gap by providing a broader perspective to link the antecedents and consequences of negative social evaluations. Moreover, he reveals the key role that audiences play in assessing these consequences, whether positive or negative, and the crucial function of media in establishing conditions in which public disapproval can bring positive results. Examples and cases cover Uber and Google, Monsanto, Electronic Arts, and the investment banking industry during the financial crisis.
