Corneal Dystrophies Walter Lisch,B. Seitz,2011

Corneal dystrophies (CD) are bilateral hereditary disorders of the cornea in which one or several parts of the cornea lose their transparency. As the dystrophy can start in different layers of the cornea, they are classified accordingly as epithelial dystrophies, stromal dystrophies and endothelial dystrophies. This volume includes a description of the new international IC3D classification of CD reflecting what we currently know of the clinical, pathological, and genetic aspects of these disorders. Further contributions give an insight into differential diagnostics and histology, which can confirm the diagnosis as for instance in granular CD type 2, as well as DNA analysis of CD providing additional information about the pathogenesis. Also, procedures such as the phototherapeutic keratectomy with the excimer laser, the new modalities of lamellar keratoplasty, and penetrating keratoplasty are described. This publication holds a wealth of new and topical information on CD for ophthalmologists and geneticists alike.

Genetic Diseases of the Eye Elias I.

Traboulsi,2012-01-12 This book takes a clinical approach to the patient with a genetic disease that affects the eye. The chapters on particular types of diseases follow the same organizational format, covering history, pathogenesis and etiology, epidemiology, classification, clinical manifestations and diagnosis, and treatment. The recent progress achieved in the molecular genetics

of eye disease is fully reflected throughout the book. It is written by leading experts in the field and provides clinical, molecular genetic and management information on common and rare diseases. The chapters are heavily illustrated and provide a good Atlas for the practicing ophthalmologist or geneticist.

Reinhard, Frank Larkin,2007-12-10 This outstanding volume in the Essentials in Ophthalmology series presents recent developments in the diagnosis and treatment of corneal disease. Its intention is not to replace the relevant textbooks, but to serve as a bridge between primary and tertiary literature. The superbly structured volume covers a dizzying array of topics including Herpes simplex keratitis; amniotic membrane transplantation for the treatment of corneal ulceration in infectious keratitis; and Chlamydial infection, all three of which are hugely relevant today. All the topics have direct clinical importance and will not only keep ophthalmologists up to date, but will inform them of how to treat their cornea patients with optimal diagnostic and therapeutic procedures.
