**Ken Yeang**

**New Bamboo** Marcelo Villegas, 2003 Bambusa guadua, the tropical giant bamboo, is the most versatile, reliable architectural material of its native mountainous regions. Bamboo's delightful exterior and exotic reputation obscures its oaklike strength. 'New Bamboo' is a colour portfolio of contemporary structures and decorative designs demonstrating the appeal of building with natural materials for the modern eye. Properly treated, bamboo is as reliable as prime-grade hardwoods, beautiful in its own right, and suitable for commercial and residential structures in any climate. This is an anthology of bamboo construction by different experts: an agronomist, architects, a designer, and a builder, that showcases projects in Mexico, Brazil, Ecuador, Panama, and Colombia, where this product has been used as a traditional construction material for centuries. Also covered are France and Germany, where architects are discovering the delights of working with bamboo. Guadua is beautiful but not so delicate that it cannot be used in commercial structures like the auditorium-size pavilion built for the Hannover Expo 2000. Here are delightful details and rugged outbuildings that show bamboo as a most natural design element.

**Designing with Nature** Ken Yeang, 1995 A timely, incisive book providing a comprehensive framework for designing buildings that work with nature. Offering a compelling case for ecological design, it provides architects and designers with a full understanding of the impact that their work has on the natural environment, as well as what can be done to mitigate the damage man-made structures inflict on the natural environment.

**Bamboo Architecture** Markus Heinsdorff, 2014-09-15 Since 1997, architect and installation artist Markus Heinsdorff has focused much of his work on the potential and possibilities afforded by bamboo. This volume shows how that interest played out in his design for the Sino-German pavilion at Expo 2010 in Shanghai.

**Bamboo Architecture Unboxed** Jorg Stamm, Munir Vahanvati, 2024-04-15 Bamboo Architecture Unboxed is a comprehensive guide that bridges traditional craftsmanship with contemporary design techniques to revolutionise the bamboo construction landscape. Authored by experts Jorg Stamm and Munir Vahanvati, this book explores the remarkable strength, sustainability, and aesthetic flexibility of bamboo through geometrical principles. Readers are taken on an enlightening journey from the foundational elements of bamboo design to intricate architectural forms inspired by nature. Key geometries such as hyperbolic paraboloids, hyperboloids, tetrahedrons, and geodesic domes are meticulously demystified, offering a blend of historical context, vivid imagery, practical wisdom, and step-by-step construction guides. Whether you're an architect, builder, or enthusiast of sustainable materials, Bamboo Architecture Unboxed unfolds as a transformative narrative, inviting you to push creative boundaries and shape a future where eco-conscious constructions and organic silhouettes form the core of our built environment.

**Vo Trong Nghia: Building Nature** Vo Trong Nghia, Susan Wise Bauer, 2022-04-19 A career-spanning monograph in two volumes presenting the work of one of Asia's most progressive and innovative architects Vo Trong Nghia. The work of Vo Trong Nghia is a call for architecture to transform itself from a source of pollution to a reason for hope. The World Green Building Council estimates that thirty-nine percent of energy-related carbon emissions can be attributed to buildings. An awareness of architecture's responsibilities has permeated the profession and new ideas and solutions are coming from places where these issues are most acute. Following a long recovery from decades of war, Vietnam has emerged as one of the most exciting centers of design in Asia—led largely by the work of architect Vo Trong Nghia, whose work has gained an international following. The buildings of Vo Trong Nghia Architects, established in Ho Chi Minh City in 2006, make clear reference to the past, and to Vo's own adherence to the Five Precepts of Buddhist teaching. The architect's two main themes—green architecture and bamboo as a building material—form the basis of this two-volume celebration of his work. From the Wind and Water Bar, his first foray into bamboo as a building material, to resort complexes, art installations, and his game-changing series of residences, *House for Trees*, *Vo Trong Nghia: Building Nature* proves that green architecture creates local relevance, beauty, and elegance in its own right.

**Bamboo** Simone Schleifer, 2019-07 Bamboo has gained the name of plant steel in the field of construction. Since ancient times, it has been widely used in Asia and Latin America. For many years bamboo had lost its role as a construction material in parts of the world where it grows indigenously due to an increase in the use of more modern material. It was gradually replaced by concrete, steel, and wood and became known as a poor man's wood. Thanks to the research and design carried out by key worldwide architects and engineers in recent decades, this attractive natural material is being reconsidered as a construction and basic design material. This book features international examples of current projects where bamboo has been used as the main material.

Contemporary Bamboo Architecture in China K. W. Liu, Q. F. Xu, G. Wang, F. M. Chen, Y. B. Leng, J. Yang, K. A. Harries, 2022-03-10 This book describes the distribution of bamboo forest and bamboo species for construction, the types and characteristics of both engineered and natural full-culm bamboo materials for construction, the development history and research status of different forms of bamboo architecture. We go on to describe standards, relevant international organizations, research institutions and production and processing enterprises and typical cases. Starting from six aspects, this book systematically describes modern bamboo building development, analyzes the opportunities and challenges faced by the bamboo construction industry and provides guidance for the development of the bamboo construction industry in China. Particularly in Chapter 6, more than 70 examples constructed mostly since 2014 are selected to provide a detailed overview of the use of bamboo as decorative and structural materials. In order to fully explore the potential of bamboo in engineering applications, the authors introduce the use of bamboo construction for transportation facilities (bridges, highway landscape fences and bus stations), landscape, water pipelines and urban municipal tunnels. The authors hope readers are inspired by these most vivid cases and experience the charm of modern Chinese bamboo architecture.

**Design by Nature** Erica Tanov, 2018-04-03 The first design book that translates elements of nature--including flora, water, and wood--into elements of decor for beautiful, lived-in, bohemian interiors, from acclaimed designer and tastemaker Erica Tanov. Inspired by nature's colors, textures, and patterns, design icon Erica Tanov uses her passion for textiles to create beautiful, timeless interiors that connect us to the natural world. Now, in her first book, *Design by Nature*, Tanov teaches you how to train your eye to the beauty of the natural world, and then bring the outdoors in--incorporating patterns and motifs from nature, as well as actual organic elements, into simple ideas for everyday decorating and design. *Design by Nature* contains new and imaginative decorating ideas for an organic and bohemian style that mixes and layers rugs, pillows, throws, and drapery, and incorporates unique patterns and fabrics such as shibori, ikat, and jamdani, all stunningly photographed by renowned photographer Ngoc Minh Ngo. With topics ranging from embracing imperfection in your home, to seeking out flea markets, to displaying your collections, *Design by Nature* takes an enduring and intuitive approach to design that transcends fleeting trends and encourages you to find your own personal style, source of creativity, and connection to the natural world. You don't need to travel to distant locales to find beauty; it's all around us, from the crackle of fallen leaves to the jagged bark of a tree.

**The Art of Natural Building** Catherine Wanek, Joseph F. Kennedy, Michael Smith, 2015-03 The popularity of natural building has grown by leaps and bounds, spurred by a grassroots desire for housing that is healthy, affordable and environmentally responsible. This collection of articles from 60 leaders in the field is stunningly illustrated with over 400 photos of natural buildings from

**Natural Architecture Now** Francesca Tatarella,2014-08-19 Our 2007 hit Natural Architecture introduced artists and architects who transform the act of building into a fascinating new art form. Built from humble elements—branches, twigs, straw, bamboo—and fulfilling a wide variety of intentions—sometimes structural, sometimes sculptural, sometimes sacred—their fantastical creations resonate with an innate natural beauty. Natural Architecture Now features all-new site-specific installations by an international list of contributors. From an engineered oasis and climbing structure in Joshua Tree National Park to an intricate bamboo installation on top of the Metropolitan Museum of Art to a residential mud structure prototype created by Architecture for Humanity Tehran, each project points a way forward for architects to engineer a new organic simplicity of structure and form.

*Building with Bamboo* Gernot Minke,2016-06-06 Although traditionally a building material of the warmer climate zones, bamboo is becoming increasingly popular amongst architects in the northern hemisphere; bamboo has several advantages – it is very stable, of low weight, and highly elastic, in addition to being readily available as well as renewable. The applications of bamboo in architecture have become significantly wider and diversified, so that today, even structures with large spans – such as bridges – are built with this material. The new and revised second edition of this manual provides a practical, systematic overview of the numerous potential applications and processing methods of this renewable material. The comprehensive presentation of groundbreaking bamboo buildings has been updated with more recent projects.

**Bamboo Architecture** Vladimir Belogolovsky,2021-02-28 From the world's leading publisher of Architecture and Architectural Practices, comes a look into how VTN Architects have used bamboo to create groundbreaking projects. With the climate crisis raging and awareness of humanity's detrimental impact on the environment now patently apparent, the need for architects to come up with sustainable new solution has never been more pressing. A key part of any green approach to architecture is the use of local natural materials with a low environmental impact. Bamboo, which has been widely used in Asian architecture for centuries as scaffolding and for bridges, pavilions, houses and other structures, is an ideal material in this context: lightweight, strong and readily available. In an effort to meet the challengers of the 21st century, VTN Architects has developed new ways of working with two species of bamboo in particular, the flexible Tam Vong and the sturdier Luong, creating a manufacturing workflow that allows for the production of standardised modules, a knitting technique that enables the material to span

large distances and environmentally friendly traditional treatments such as mud-soaking and smoking. In *Bamboo Architecture*, we see how these methods have been applied in award-winning, groundbreaking projects such as the Wind and Water Café, Diamond Island Community enter, and the majestic Vedana Restaurant, alongside an illuminating introduction by Masaaki Iwamoto and an interview with the studio principal Vo Trong Nghia who offers an inspiring vision for the future of natural, green architecture.

*Nature* Matilda McQuaid, Hans Gubbels, Gene Bertrand, 2019 An exploration of the ways in which designers are striving to transform our relationship with the natural world. Designers today are striving to transform our relationship with the natural world. While the modern industrial age gave way to designs that vastly improved human enterprise through technology, there were unintended and destructive consequences for the environment. Humans are intrinsically linked to nature yet our actions have frayed this relationship, forcing designers to think more intentionally and to consider the impact of every design decision, from an artifact's manufacture and use to its obsolescence. Designers are aligning with biologists, engineers, agriculturists, environmentalists and many other disciplines to design a more harmonious and regenerative future. Based on these new partnerships, designers are asking different questions and anticipating future challenges, which not only change the design process, but also what design means. *Nature: Collaborations in Design* includes over sixty-five international projects from the fields of architecture, product design, landscape design, fashion, interactive and communication design, and material research. More than 300 compelling and exquisite photographs, illustrations and content from data visualizations illustrate seven essays, which explain and explore designers' strategies around understanding, simulating, salvaging, facilitating, augmenting, remediating and nurturing nature. Four conversations between scientists and designers delve into topics related to synthetic biology, scientific versus design lexicon, and recent shifts in the meaning of nature with a glossary illuminating scientific, technological and theoretical concepts and processes invoked by the designers.

**The Natural Building Companion** Jacob Deva Racusin, Ace McArleton, 2012 Natural buildings not only bring satisfaction to their makers and joy to their occupants, they also leave the gentlest footprint on the environment. In this complete reference to natural building philosophy, design, and technique, Jacob Deva Racusin and Ace McArleton walk builders through planning and construction. *The Natural Building Companion*--provides the tools necessary to understand basic principles of building science, including structural and thermal engineering, and hydrodynamics. This guide offers thorough, up-to-date, and advanced installation details and performance characteristics of straw-bale, straw-clay, woodchip-clay, and cellulose wall systems, as well as earthen and stone wall systems and a variety of framing, roofing, flooring, mechanical system, and finishing options. This fully-illustrated volume informs professionals making the transition from conventional building, homeowners embarking on their own construction, or green builders who want comprehensive guidance on natural-building options. The book, part of the *The Yestermorrow Design/Build Library*, is accompanied by an instructional DVD--

*Bamboo Architecture in Competition and Exhibition* Robert Henrikson, David Greenberg, 2011 Fascinating bamboo

buildings and architectural designs from around the world from the International Bamboo Building Design Competition, the 2010 Shanghai World Expo and several other competitions and exhibitions. Architects and designers from 64 countries submitted 250 designs in 12 building categories such as family houses, urban buildings, emergency shelters, commercial and public buildings, pavilions, and even tree houses. The buildings and designs use bamboo and other natural building materials, and range from modest to majestic, commercial to humanitarian, and practical to fanciful. The results are truly exciting and innovative, providing a fresh outlook for the possibilities for using bamboo to build a new green world. At the 2010 Shanghai World Expo, great architects showcased bamboo in eight remarkable pavilions, demonstrating the contribution bamboo can play in a better life.

Light, stiff, strong and incredibly fast growing, bamboo is a true super-plant, and in construction it is becoming a super-material. Used in many cultures for generations, it is enjoying a renewal of interest around the world due to its unique properties and the wide range of uses it can be put to. Collected here are some of the most beautiful, creative and cutting edge bamboo projects of recent years, illustrated with full color photographs, plans, and the architects' explanations of their techniques and inspirations.
